About Me

Experience

EY Design Studio (Current)

2023-2024

- Worked with Allstate Insurance to redesign their customer and employee digital experiences
- Worked with OLG (Ontario Lottery and Gaming) to document their design system components across 20+ lottery brands
- Worked on various internal web and mobile projects including an AI-powered chatbot, a new studio website, and more

See my resume or LinkedIn
for a full list of my previous
positions and projects

linkedin.com/in/seanreibling
seanreibling.com/about

Four Seasons Hotels & Resorts

2023 (4 Month Contract)

- Assisted with component documentation and updates
- Designing new features for the hotel website and mobile app
- Created visual brand ideation for new company initiatives.

Lassonde School of Engineering

2021-2022

- Created a web interface to search for learning outcomes across the school's new courses
- Redesign the school's online learning platform
- Designed an engineering conference website for CEEA 2023

What I Do

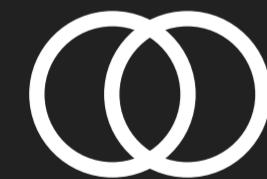

UX Research

I employ design research methodologies to understand UX problems empathetically and from a user-centric perspective.

Interface Design

I care deeply about the craft of interface design — creating clean and beautiful UI to promote delightful experiences and interactions for users.

Visual Design

I come from a traditional design background and have a core understanding of visual and typographic hierarchy, branding, and layout.

Front-End Dev

I speak the same language as developers. I know HTML, CSS, and basic-level JS and have helped code various websites (including my portfolio).

My Values

Simplicity

My style is minimalist. I strive to create intuitive interfaces by decluttering pages and presenting content methodically. Where appropriate, I take stylistic direction from Apple and Google developer guidelines.

Accessibility

Creating inclusive experiences means designing for a wide range of end users. I am AODA certified, and aim to incorporate web accessibility best practices into the foundation of every project.

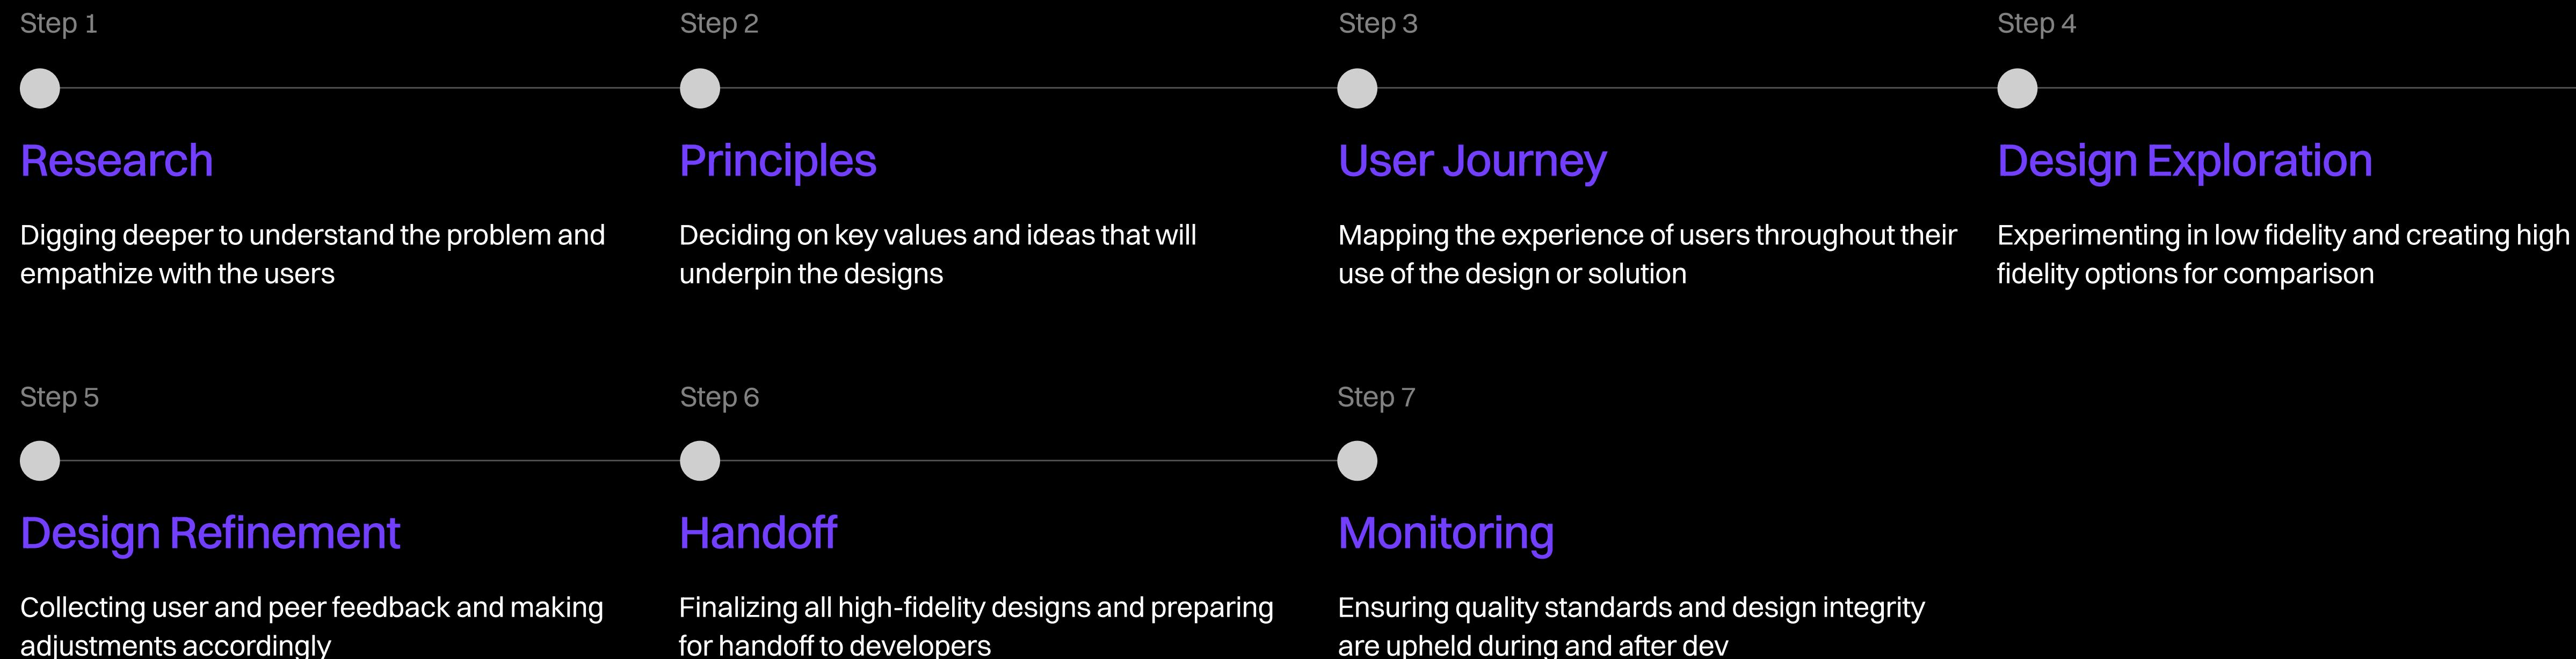

Scalability

Flexible design systems are central to my work. This means systems that are designed to scale over time, and interfaces that look beautiful and function equally on every device size.

Integrity

Most critically, I design products that are ethical; interfaces that treat users with autonomy and respect. My goal is to design truly useful experiences that add value to people's lives and their communities.

How I Work

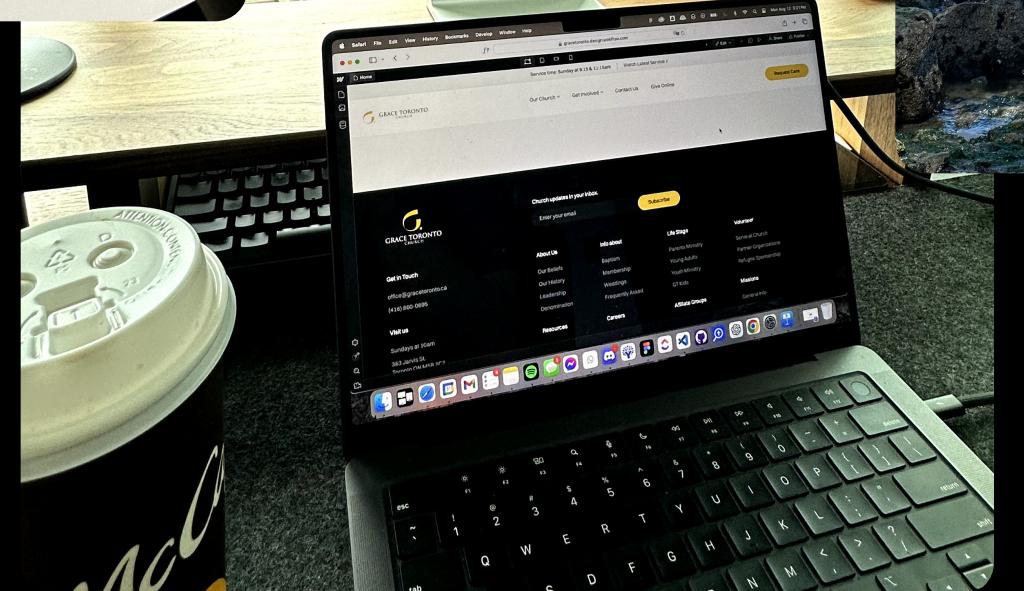

Outside of work...

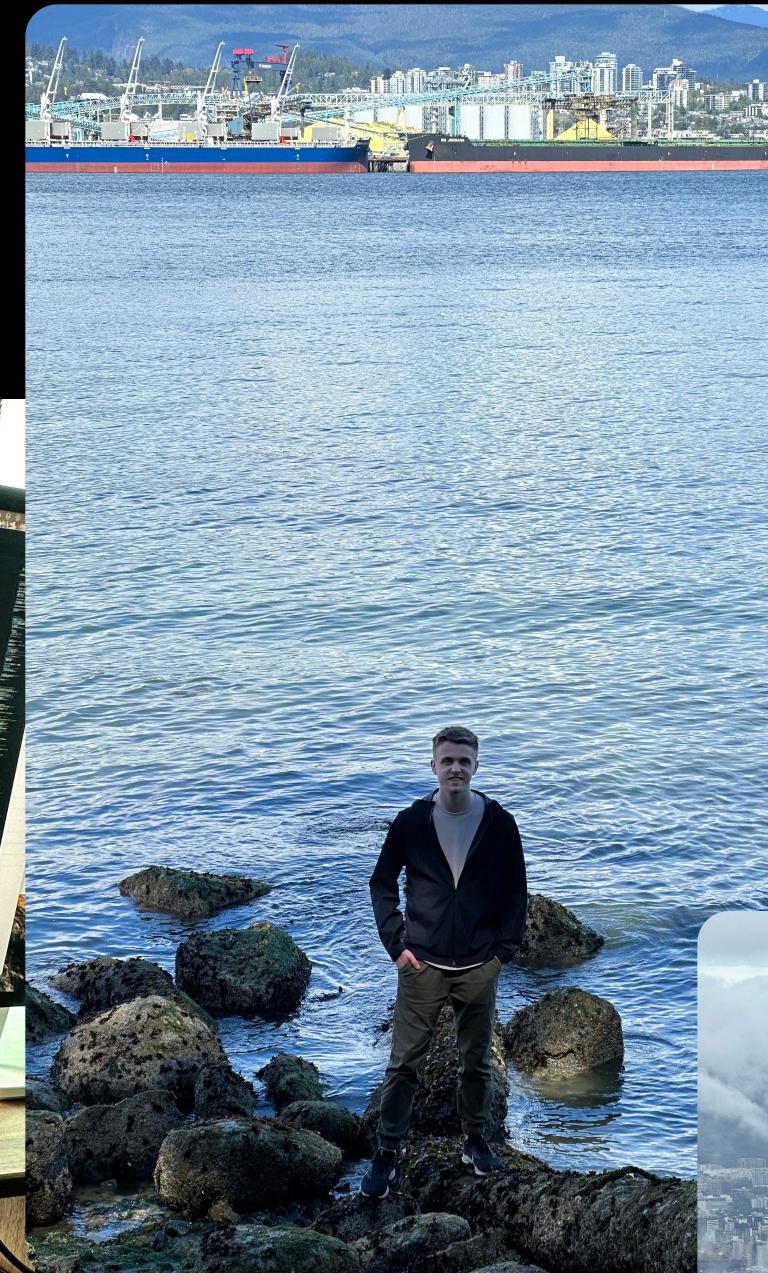

Collecting design books

Case Studies

Allstate Insurance Mobile App

Case Study 1

My Role
Junior Designer

01

Background

Project Context

Key Teams

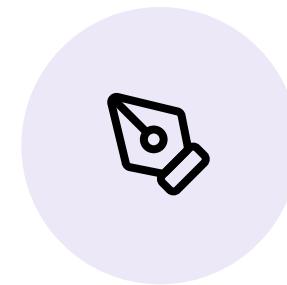

Overview

Allstate Insurance approached my studio to collaborate on a new mobile app, desktop employee interface, and broker experience.

This case study touches on the consumer mobile app only.

Key Teams

3 core groups contributed to this project.

UI/UX Team

This team consisted of 4 designers responsible for all user research and experience components of the project, including the discovery, ideation, personas, IA, and more. This team also created the visual interface/UI in consort with the Allstate team.

Insurance Consultants

Our UI/UX team worked closely with adjacent consulting divisions at EY with personal who were more familiar with the insurance landscape as well as competitor mobile app experiences.

Allstate Management

We worked with Allstate leadership throughout every step of the project as we conducted user research, developed IA, prototypes, and the final design deliverables.

02

The Problem

Original problem

Research

The Goals

The Problem

Allstate customers are not using the mobile app to submit claims at the site of an automobile accident. In addition, the interface looks outdated and is not in line with the updated Allstate brand.

Details

Allstate Insurance was looking to overhaul the mobile claims submission process for customers in automobile accidents. Before working with us, they found that only around **half of users began a mobile claim**, and a further percentage **abandoned their claim** part-way through the process.

Research

How do customers feel about the current mobile claims experience?

Do they know about it? What is their experience with the process like?

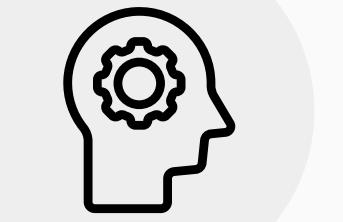

Lack of awareness

Users were unaware that a claims process was available in the app

Hesitation or Uncertainty

Users had presumptions about how complicated the process would be

Information Overload

Users who began the claims process felt overwhelmed with the amount of information presented to them

The Goals

How can we envision a future state for Allstate that increases visibility and usage of the mobile claims process while reducing the abandonment rate?

1

Increase Mobile Claim Submissions

2

Decrease Mobile Claim Abandonment Rate

03

Solution

Proposed Solution

Design Principles

Key Solution Elements

Claims Journey Map

Proposed Solution

Design a new mobile claims experience that is more intuitive, less overwhelming, and quick to complete at the site of the accident

How to Achieve

1

Make better use of progressive disclosure to reduce cognitive overload

2

Add features that make the input process faster and more automated

3

Update the branding to reflect a more modern and seamless experience

Design Principles

01

Help the customer feel at ease

Our design must promote a sense of calmness and order.

This can be achieved by creating a process that is intuitive, simplified, and visually decluttered.

02

Understand and empathize

Being in an automobile accident can be an incredibly stressful experience.

It is imperative that we understand where the user is coming from and empathize with their experience and emotions.

03

Think beyond existing experiences

To create a truly great customer experience, we must think beyond the traditional understanding of a claims process.

How can we design an experience that is truly proactive?

Key Solution Elements

Dispatch management

Determining whether additional services, such as EMS or towing, are required at the site of the accident.

Claim Submission

Step-by-step guidance through the core claims process at the site of the accident. Submitted on-site.

Service Options

Recommendations for nearby auto service and repair facilities as well as option to book appointment.

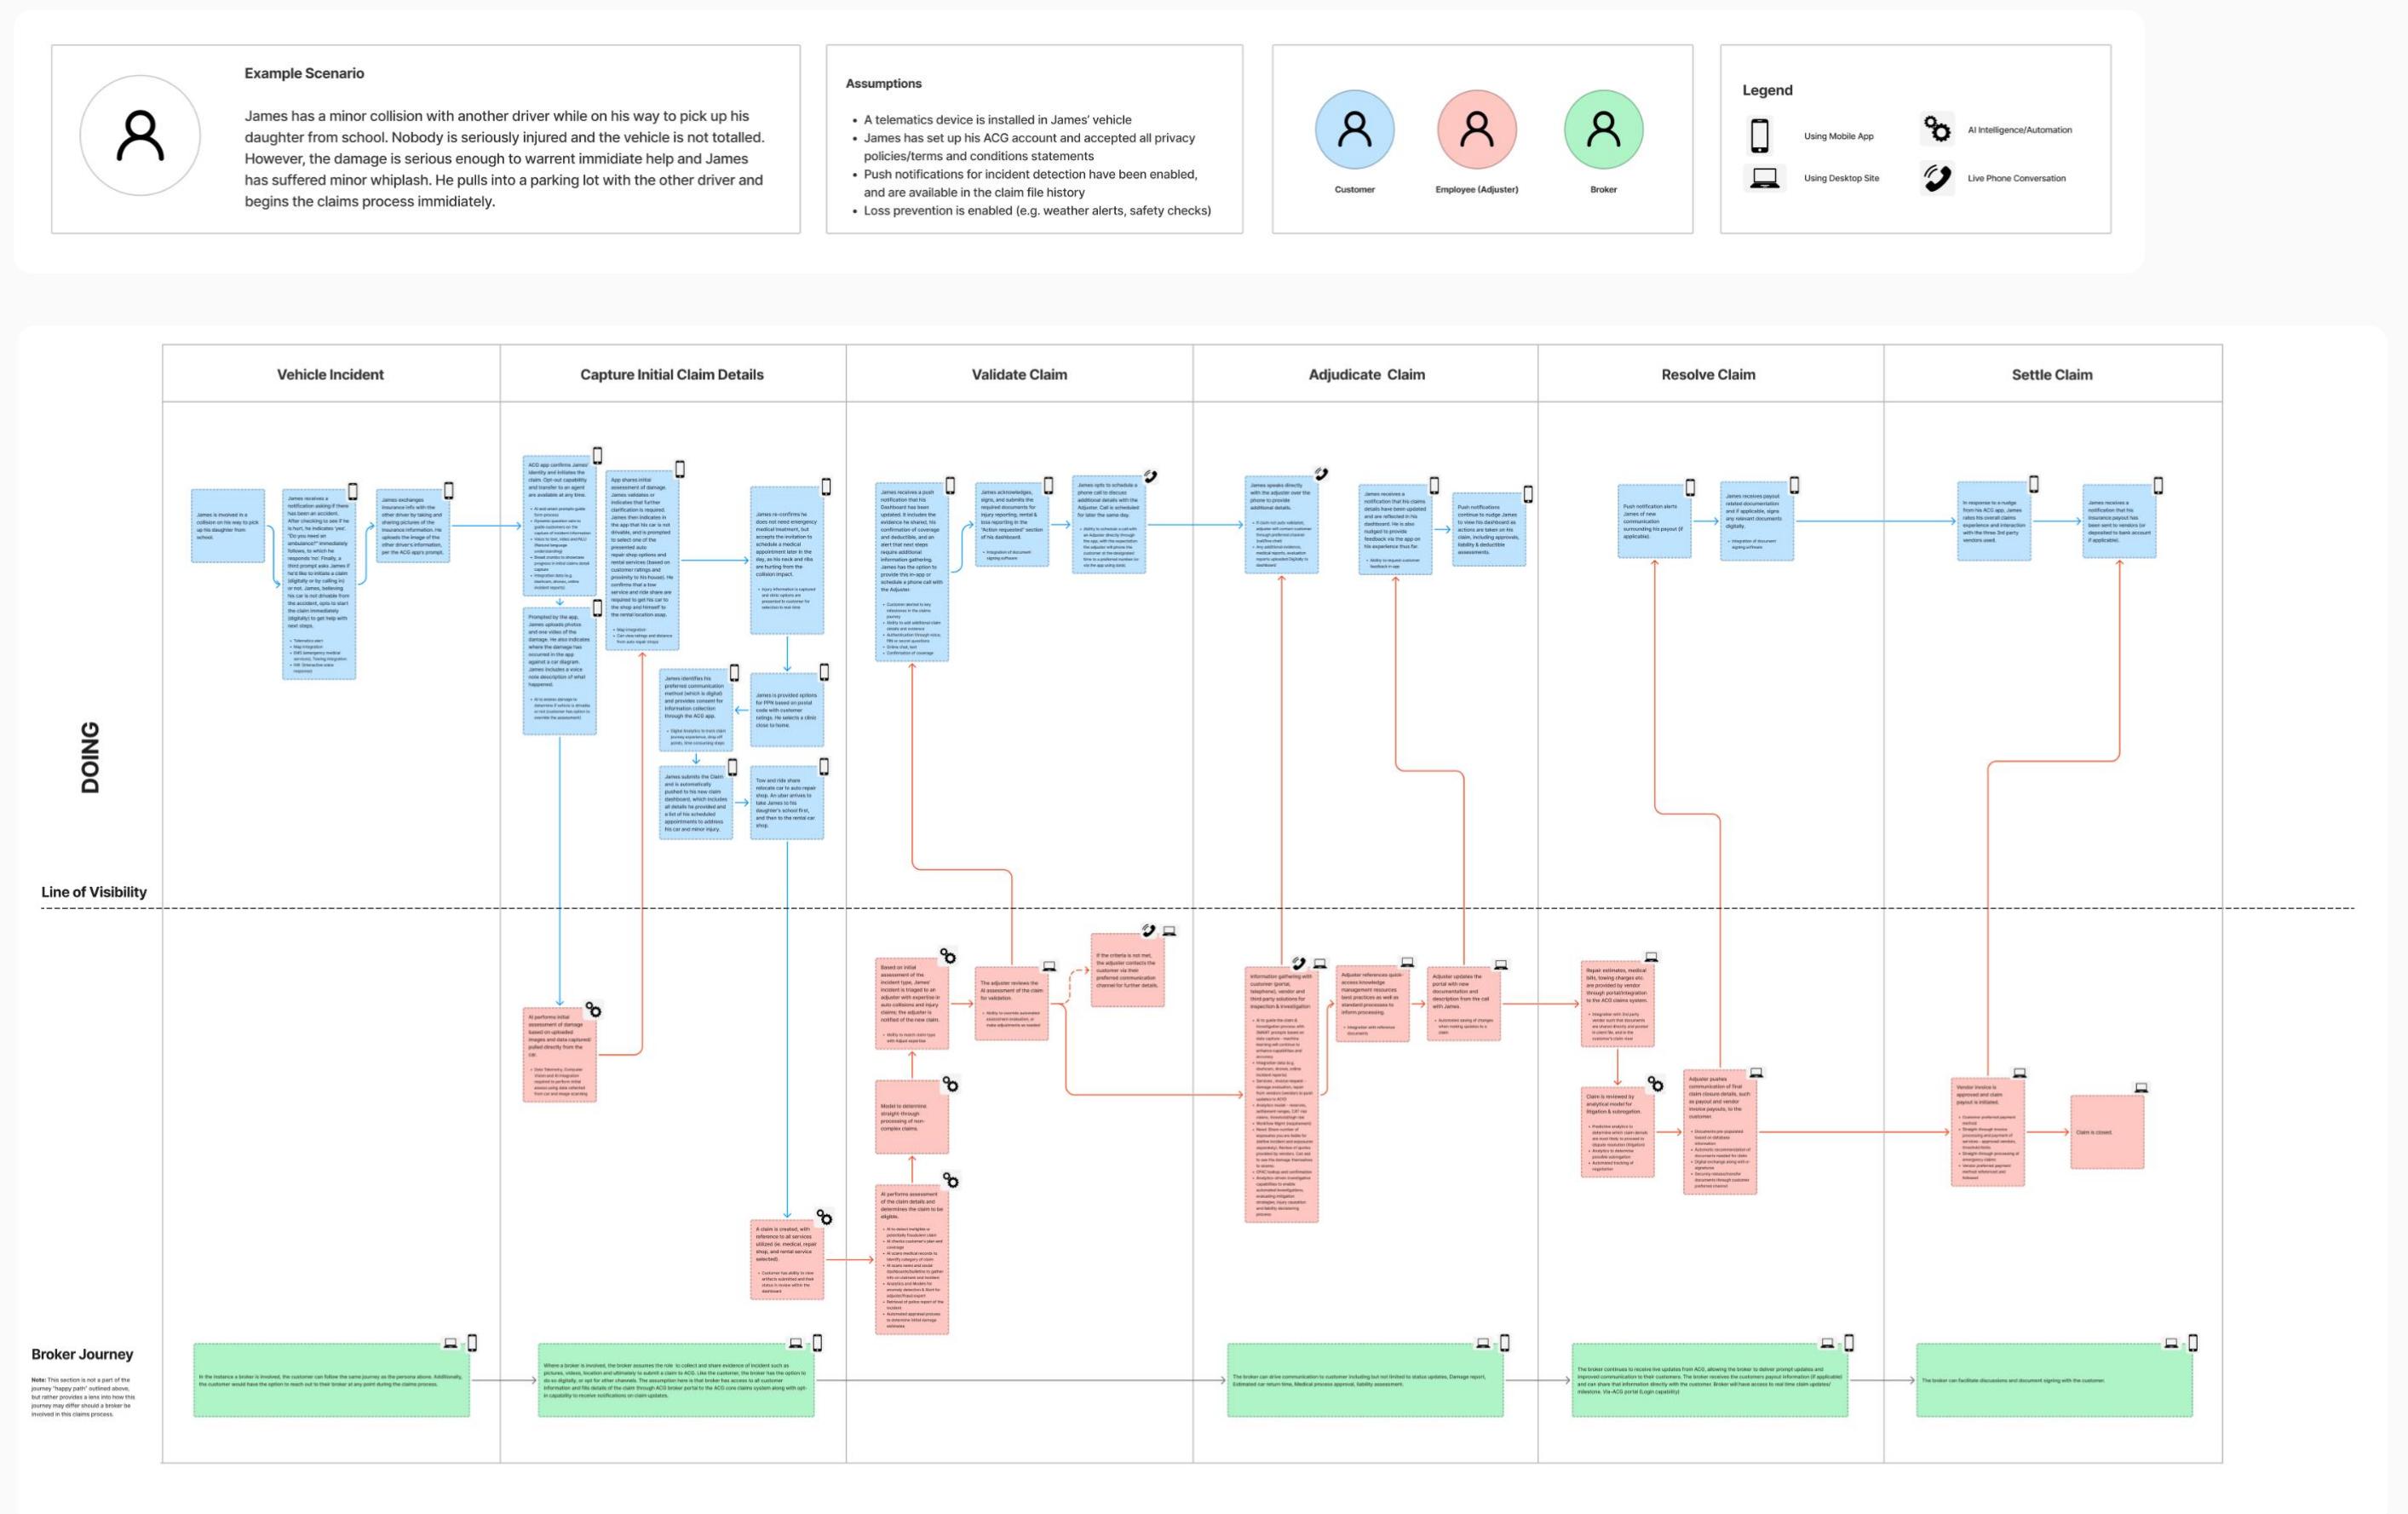

Claim Tracking

A new dashboard for viewing the status of and receiving updates for previously submitted insurance claims.

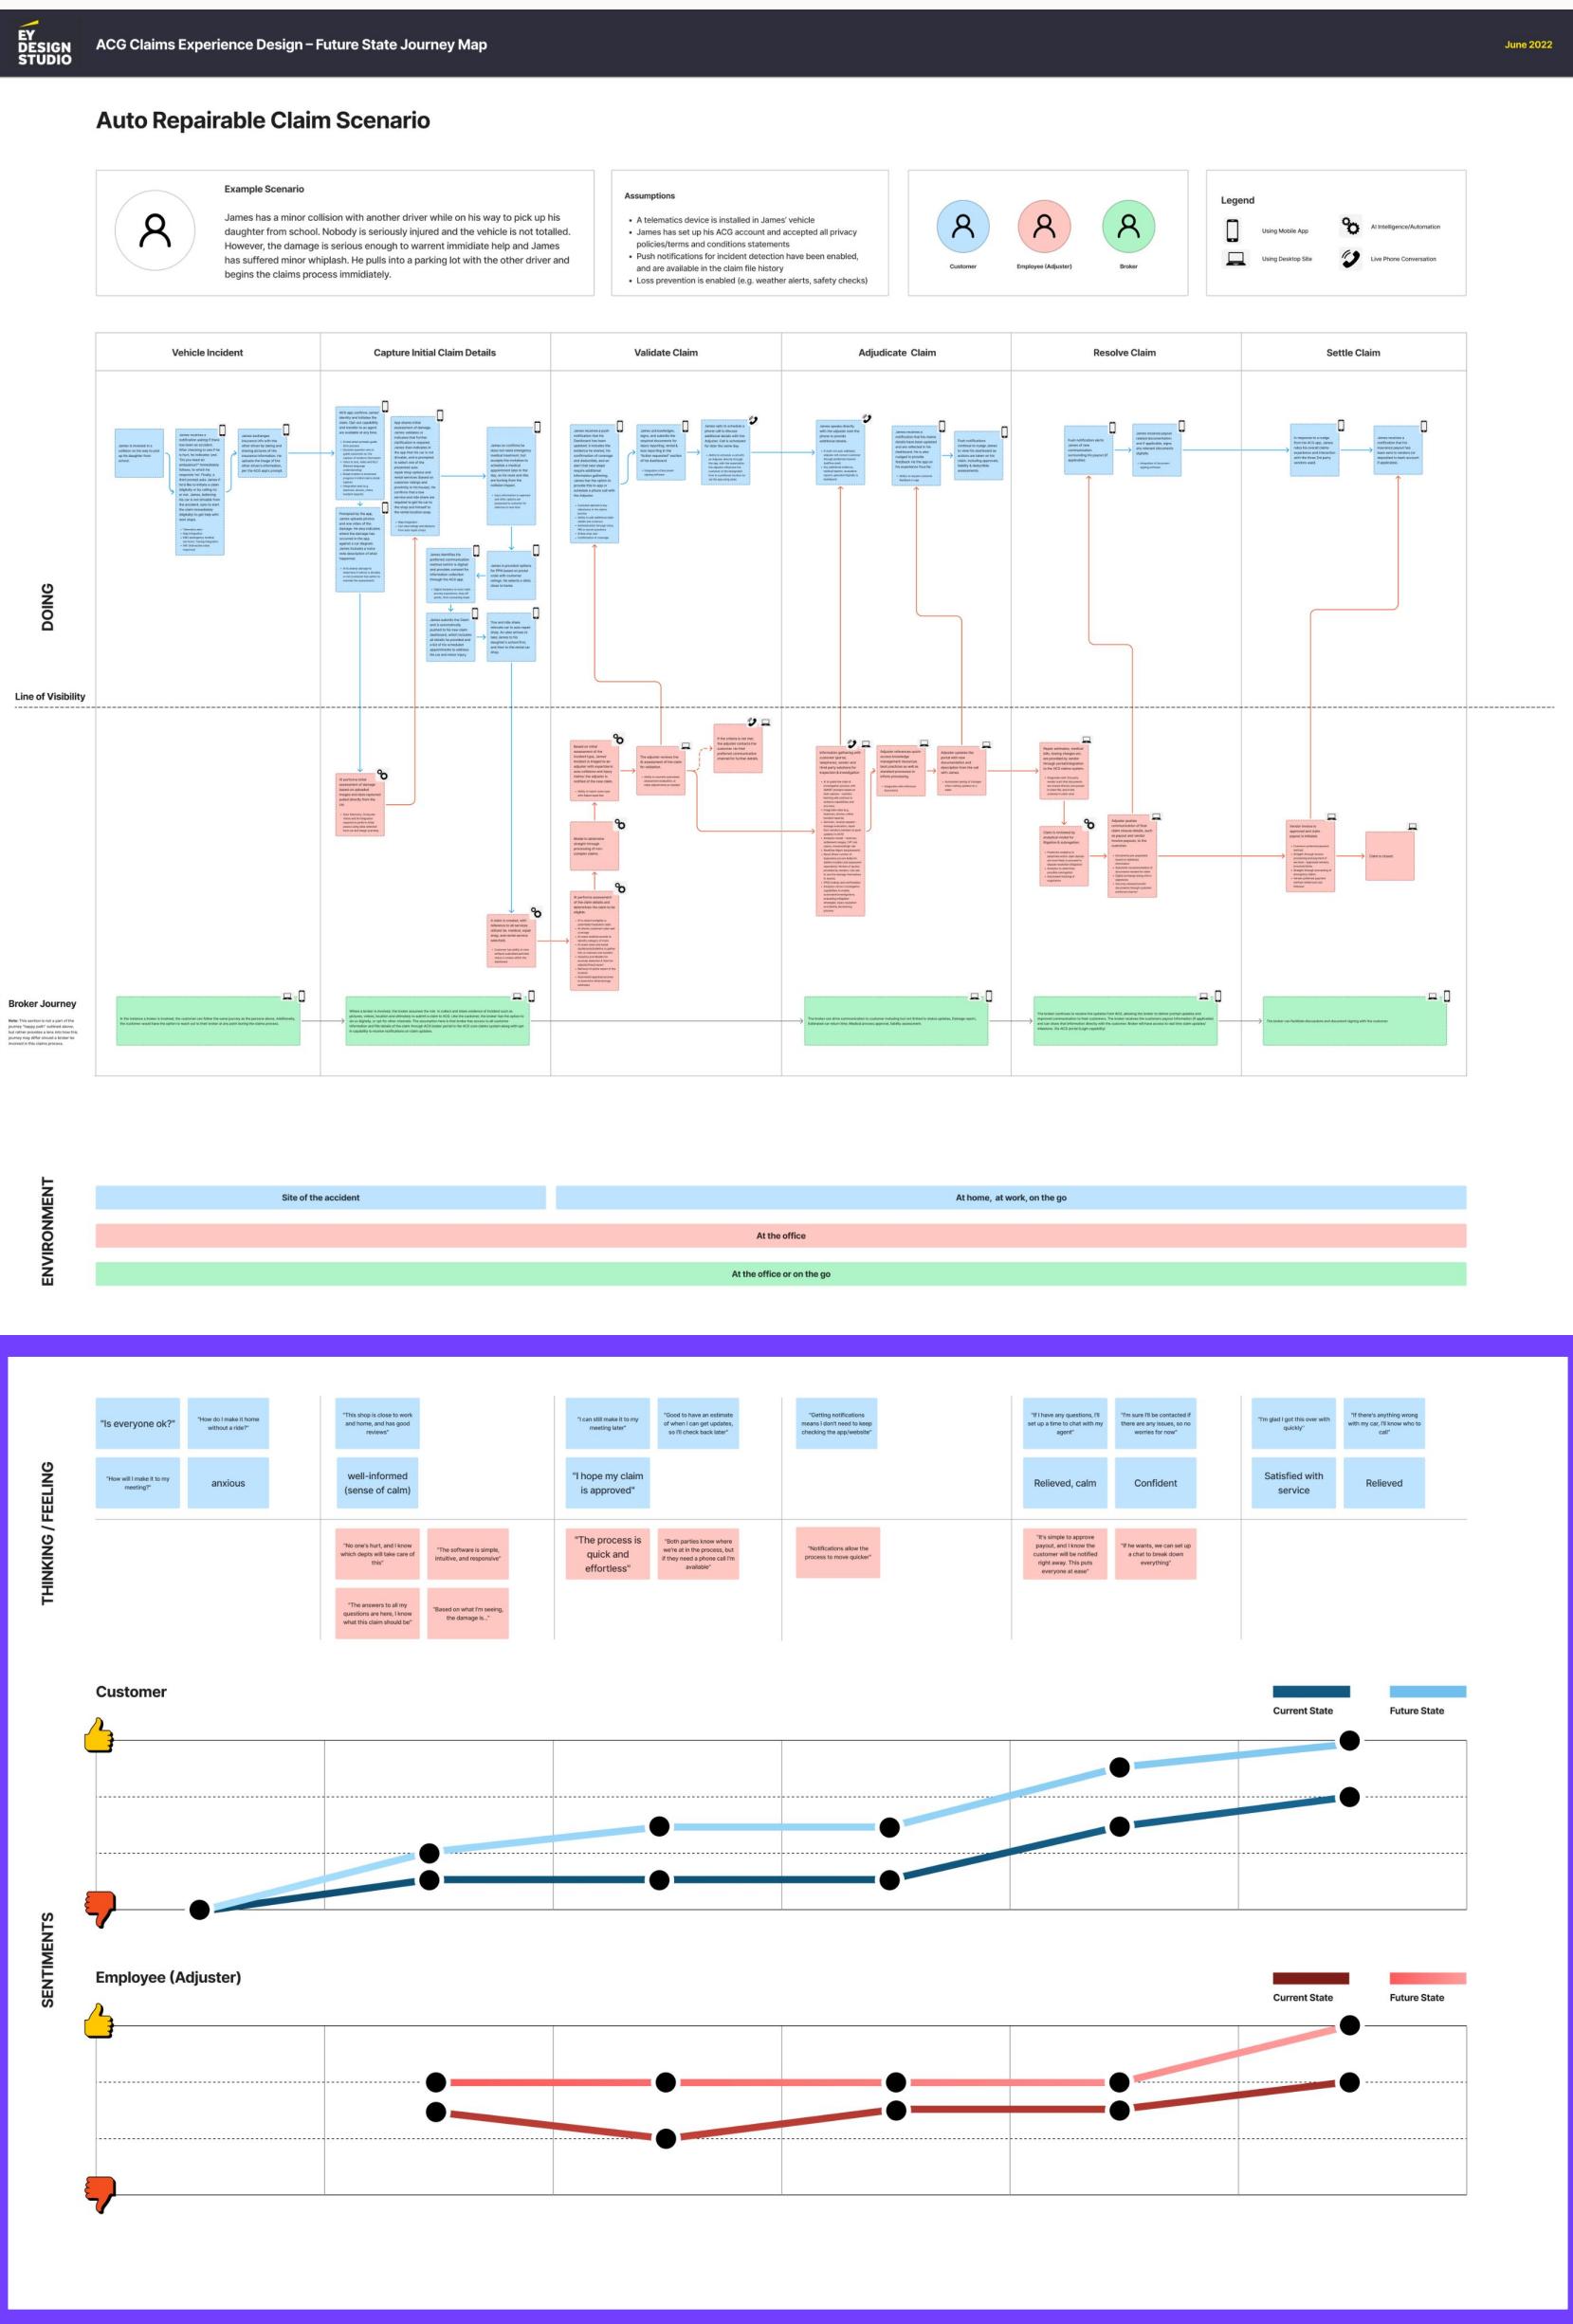

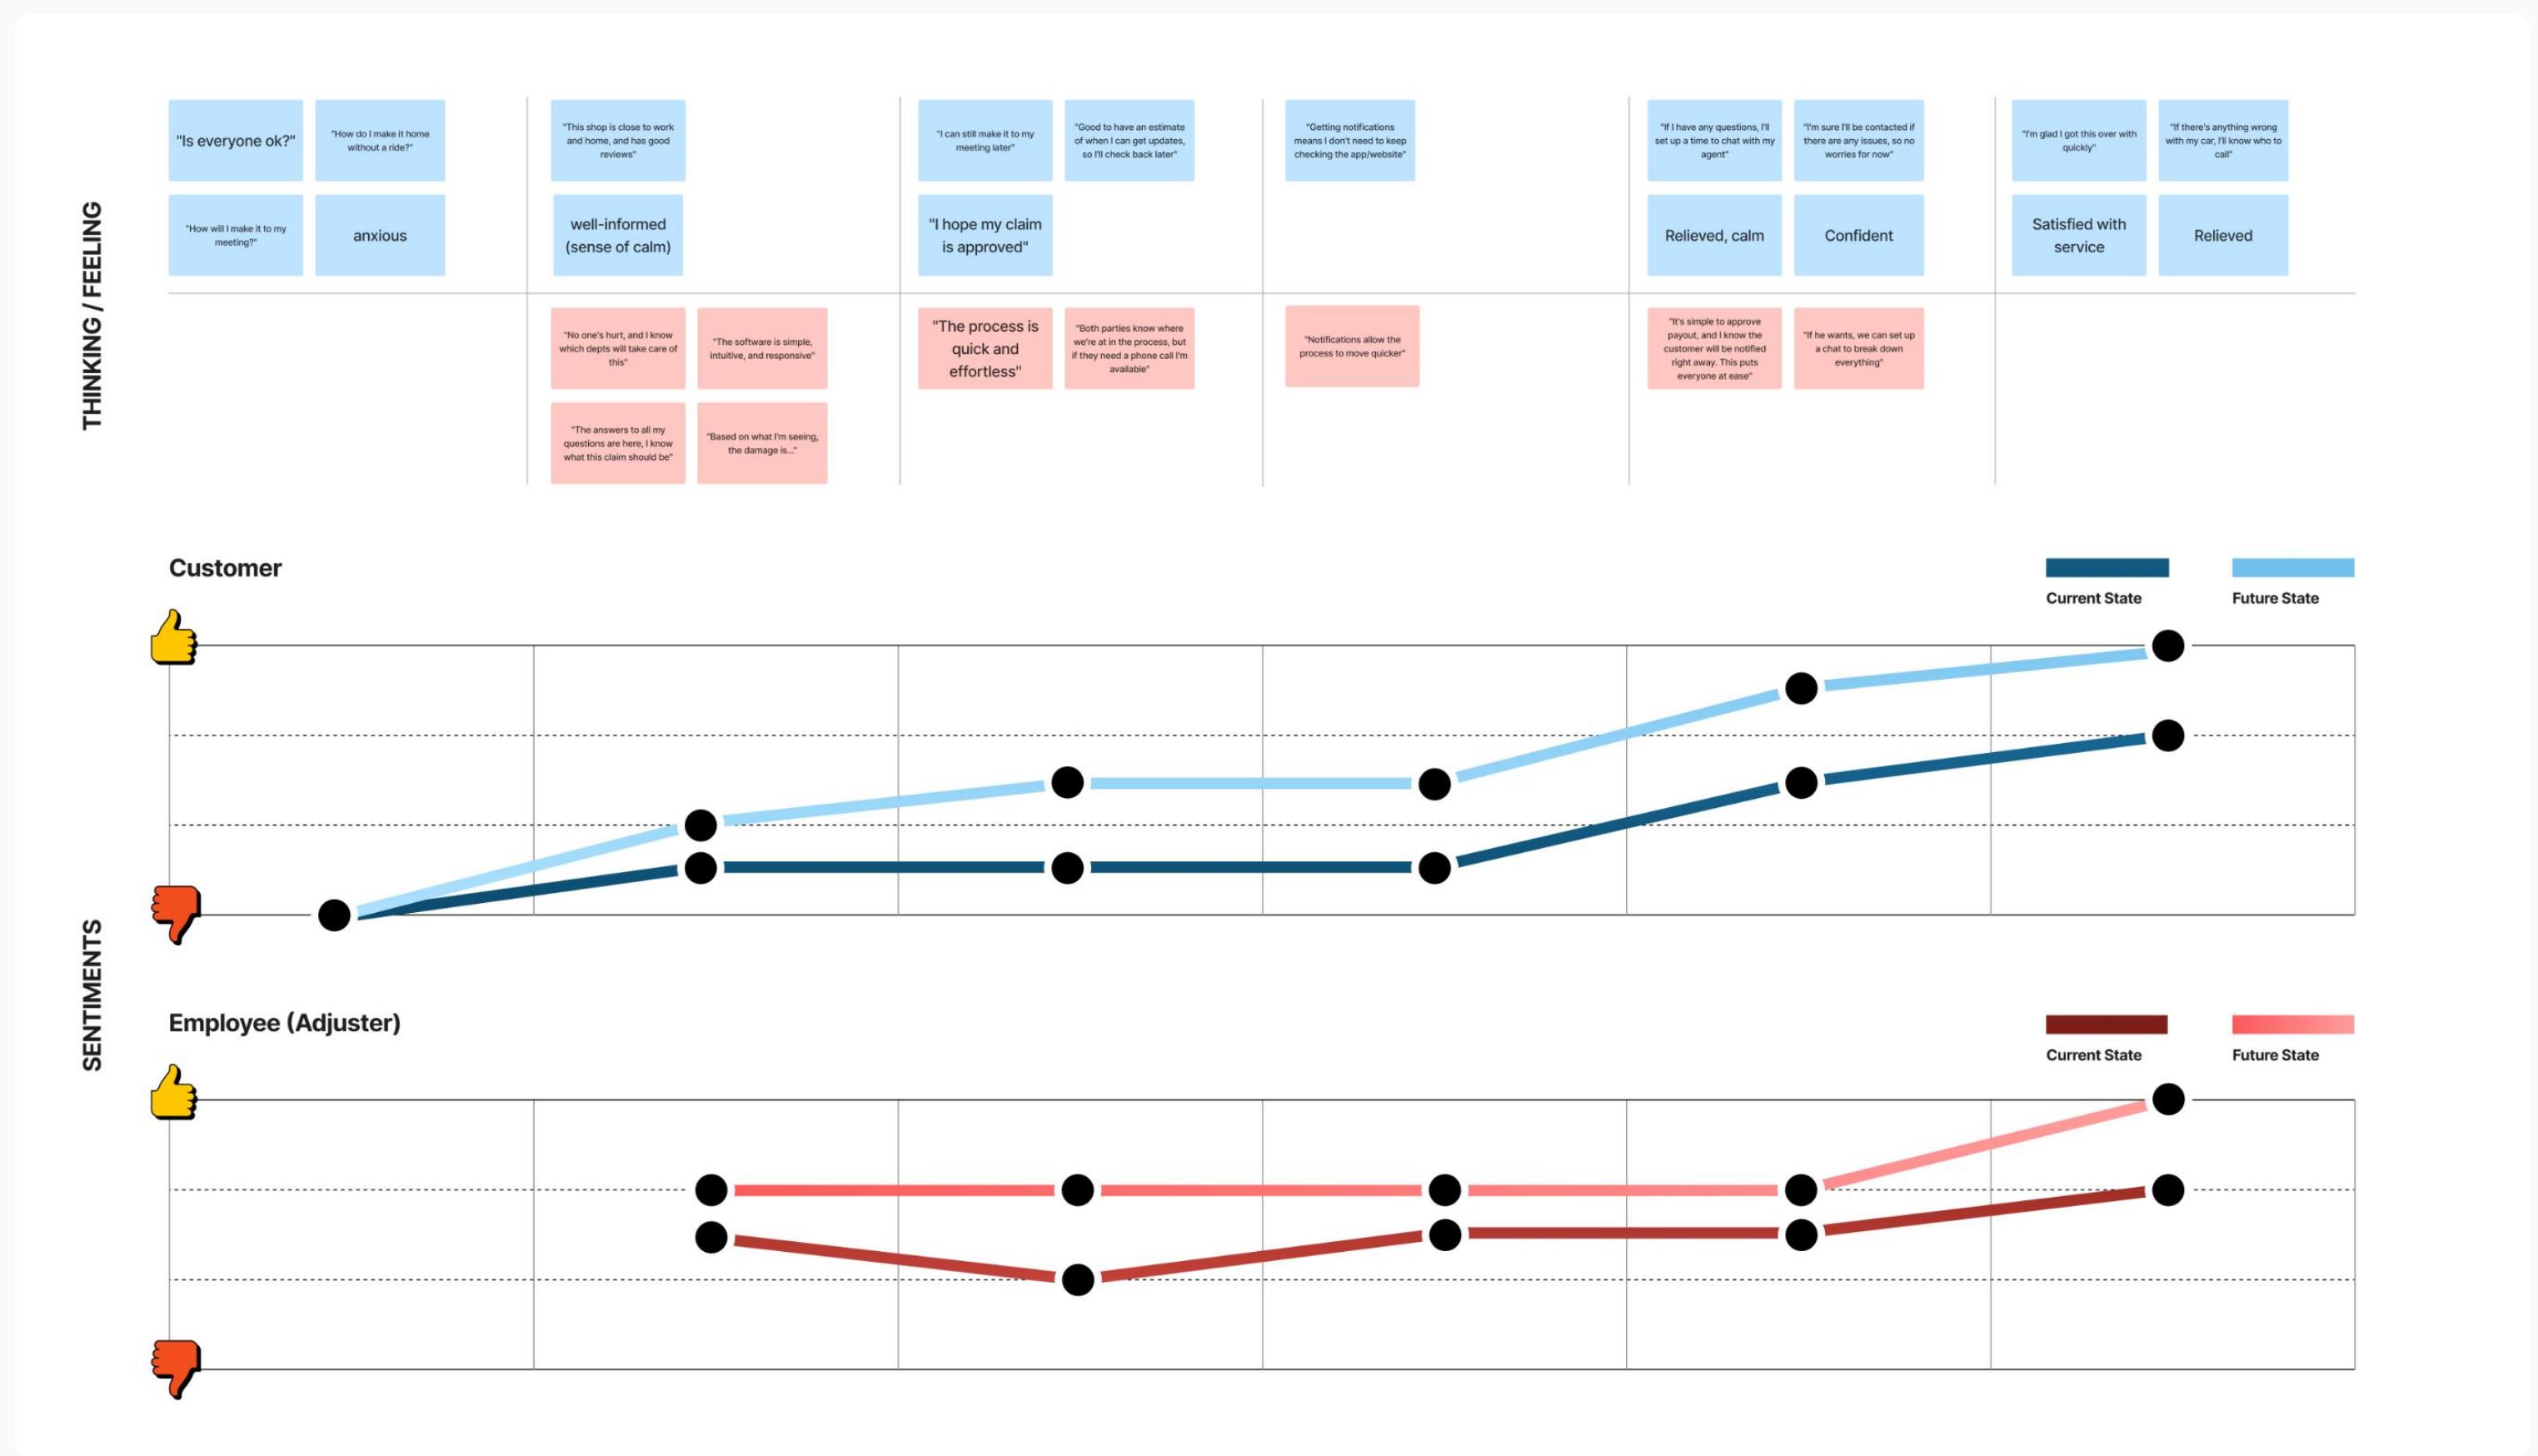

The Claims Journey

What is the customer doing?

The Claims Journey

How is the customer feeling?

Third Party/Witness Information

Low-Fidelity Flows

User Testing

Contextual/background/habits

• little understanding of insurance prior to purchasing home Renée Xu	“...looked at at least 10 insurance providers..that's where started to understand difficulty in getting insurance, risks, liabilities, etc.” Renée Xu	• has always been an Allstate client, always “seen benefit of having that type of combo insurance” • later got into Home and Car insurance and enjoyed voice call service • finds website slow, so always reverts back to calling Renée Xu	• primary driver roughly 7-8 years ago • claims always through allstate for home/car Renée Xu
• has family, with allstate for a while • considers it a relatively low-cost expense compared to rest of mortgage, but increasing prices might drive future decisions Renée Xu	• uses auto insurance apps, but not for home due to low interaction/ need Renée Xu	• some experience with insurance company • auto, stuck with this insurance since purchasing first car Renée Xu	• price as important factor, university partnerships with insurers (ex. alumni) Renée Xu

Competitors & favourable experiences

• generally values good customer experience e.g. Amazon “good at mitigating issues or risks over phone-- reasonable and quick”, Uber Eats “good at handling delays/ redelivery” Renée Xu	• insurance specific: Statefarm “heard good things” (specifically from landlords) Renée Xu	• Insurer: Trip monitoring app, privacy concerns but offered discount • Provides insights on driving (score, speed, etc) Renée Xu	• ex. Bank wallet app tracking spending: notif when purchase made to be notified immediately of suspicious activities Renée Xu
---	---	---	---

Unique claims experience

Situation

• values “great online service experience or product in general” • ex. “PC Financial, whatever can be done on desktop can do on mobile” • but when became simply financial→ more complicated (introduce more notifs, overlapping as user doing day to day transfer) Renée Xu
• “navigation is one of the most critical things” Renée Xu

• values simplicity of login, due to having lots of accounts (2 step verify, simple pw reset process) Renée Xu
• another experience: in-laws house, elusive adjuster, not hands-on, slow • calling receptionist, took too long to find case, found delivery too long • assigned ACG adjuster to give updates and asked for pictures → + insights on what could be covered • allstate pushed to take Renée Xu

Strengths

• fender bender with a raccoon at night → 17 year client • called agent right away, annoyed that agent wasn't in service/inactive • had to google 1800 number → connected with office unfamiliar with claim, becoming length • agent then connected with claim specialist/ adjuster → receives link through SMS to submit pics (issues with submitting) • prefers email, but new service to send photos through SMS made “things more complex” Renée Xu
• process generally straight-forward w/ making calls and answering adjuster Renée Xu

• “relatively expedited”, no long waiting period for evaluation, but would have preferred 1-day turnaround Renée Xu
• Acknowledging concern and customer perspective Renée Xu

Challenges/bottlenecks

• wanted to have more insights into “how long this all could possibly take” • breadcrumbs showing progress, “better timing awareness through stage of journey” (to keep tenants updated and reduce stress) Renée Xu
• loss of trust due to data breach with spam and unauth charges, lengthy process to get back • “seems like they didn't know what was going on with online” Renée Xu
• Transparency (i.e. using scientific fact to explain damage eval vs. “I reviewed with my team” Renée Xu
• Lengthy turnaround/ delivery time Renée Xu
• was referred to a clinic that was closed, preferred going to one she knows Renée Xu

Improving insurance claims process

Improving claims process efficiency

Desire for automated processes with notifications for a smoother experience.

Frustration with delays in reaching agents and adjusters.

Preference for online forms with callback features for quicker responses.

Enhancing online customer experience

Customers seek a more proactive and transparent online experience similar to Uber Eats notifications.

Request for a claims status portal for updates and ETA of responses.

Concerns about the impersonal nature of websites and the need for real-time support.

Importance of transparency and communication

Customers value transparency in the claims process and want more awareness of the process.

Desire for greater transparency in provider selection and quality control.

Need for a more straightforward and timely claims process.

Customer preferences and habits

Customers prefer email communication for documentation purposes.

Some customers revert to phone calls due to poor online experiences.

Importance of simplicity in login processes and navigation for better user experience.

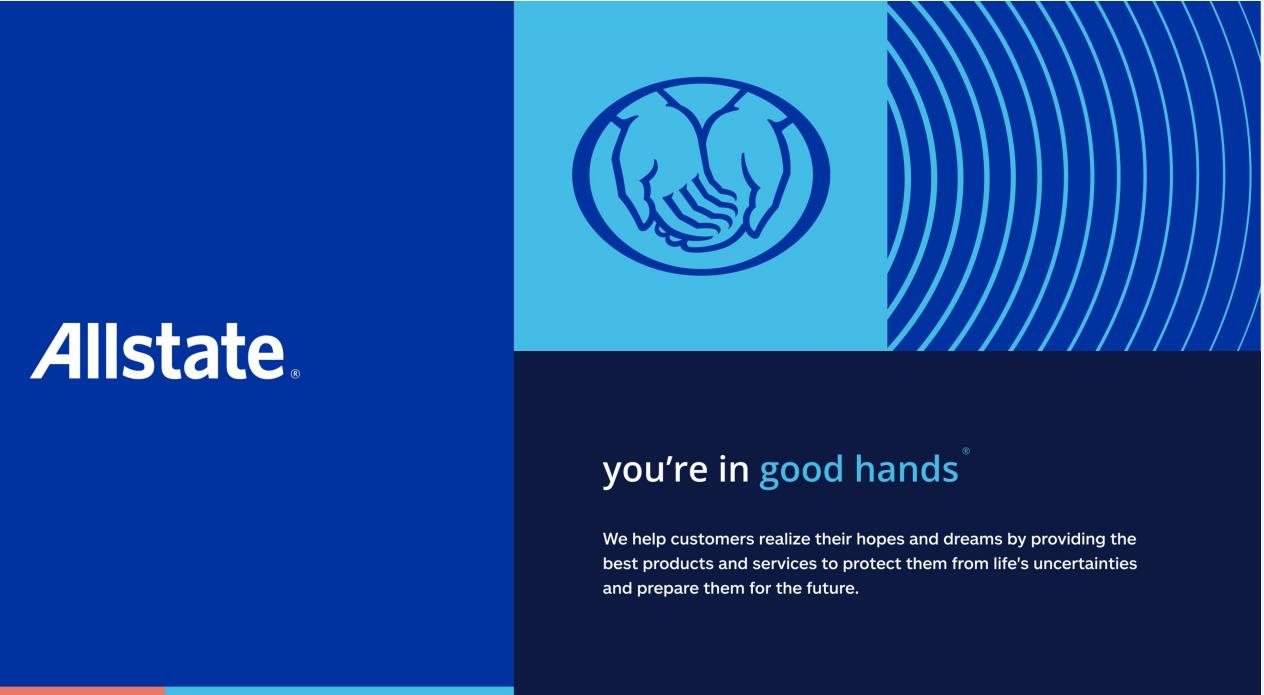

Unique claims experiences

Varied experiences with insurance providers and claims processes.

Challenges and bottlenecks faced during the claims process, including delays and difficulties in communication.

Unique insights into customer perspectives and preferences based on individual experiences.

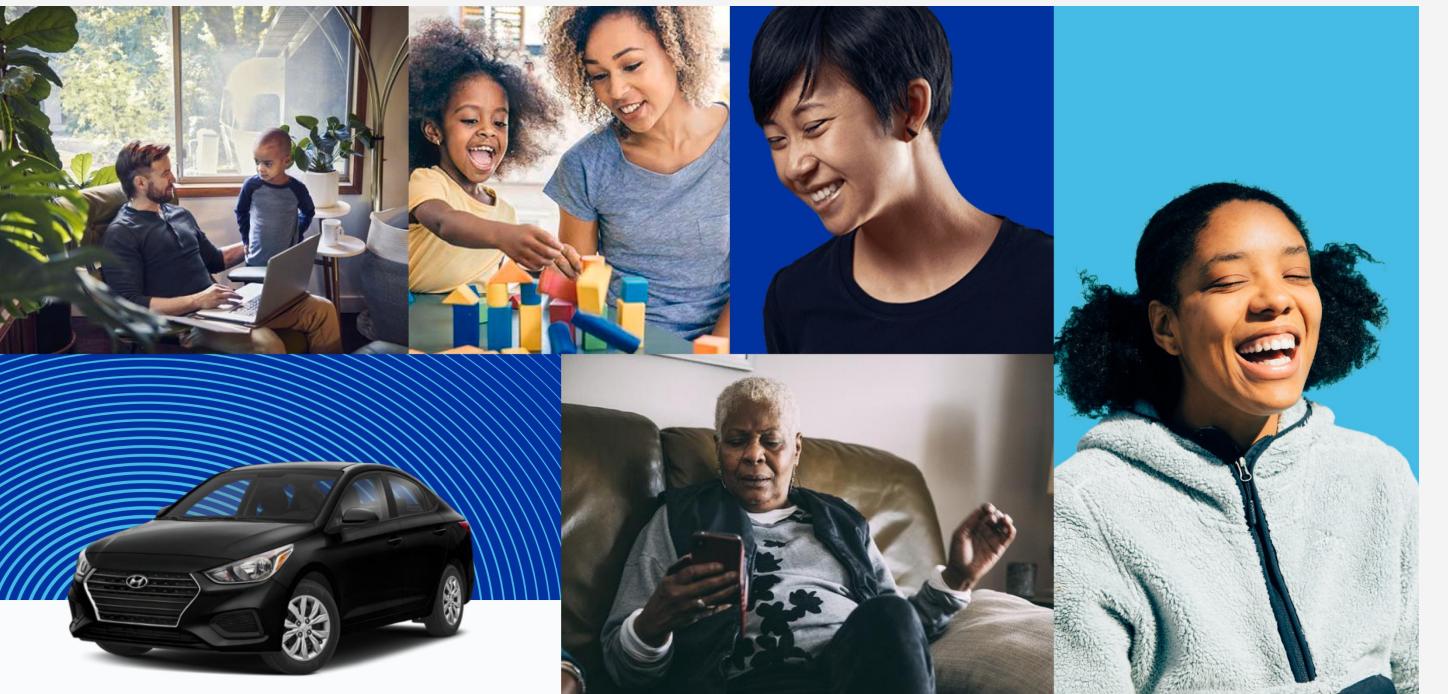

UI Kit Style Guide

our brand

The wordmark has a contemporary feel, adopting more geometric characters inspired by our Beacon logo. The characters are bold while feeling more approachable and friendly. The typeface in our watermark is always set in one flat color. It should include the 'A' symbol in the lower right-hand corner whenever possible. The Allstate Beacon logo watermark helps to inform one part of our distinctive shape language. The angle is 32°.

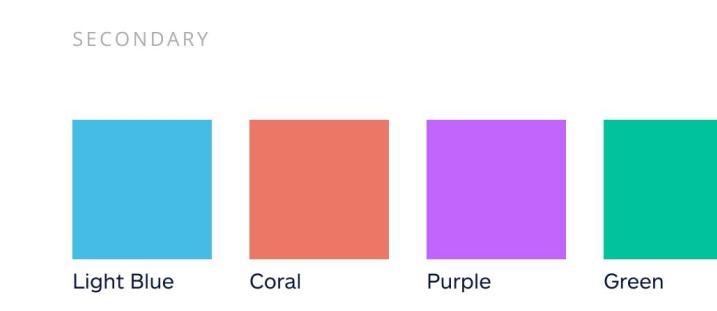

The Allstate Beacon is a symbol for the brand. The new circular hexagon shape was introduced to represent the protective side of Allstate. The Beacon may be decoupled from the logo to put extra emphasis on one brand's core assets, while offering a more flexible icon system. When decoupled from the wordmark, the Beacon can be placed as a sign-off, or in its own dedicated box.

Business Impact

Design Handoff

Working with developers to ensure design component documentation is clear and that design integrity is upheld throughout the development process.

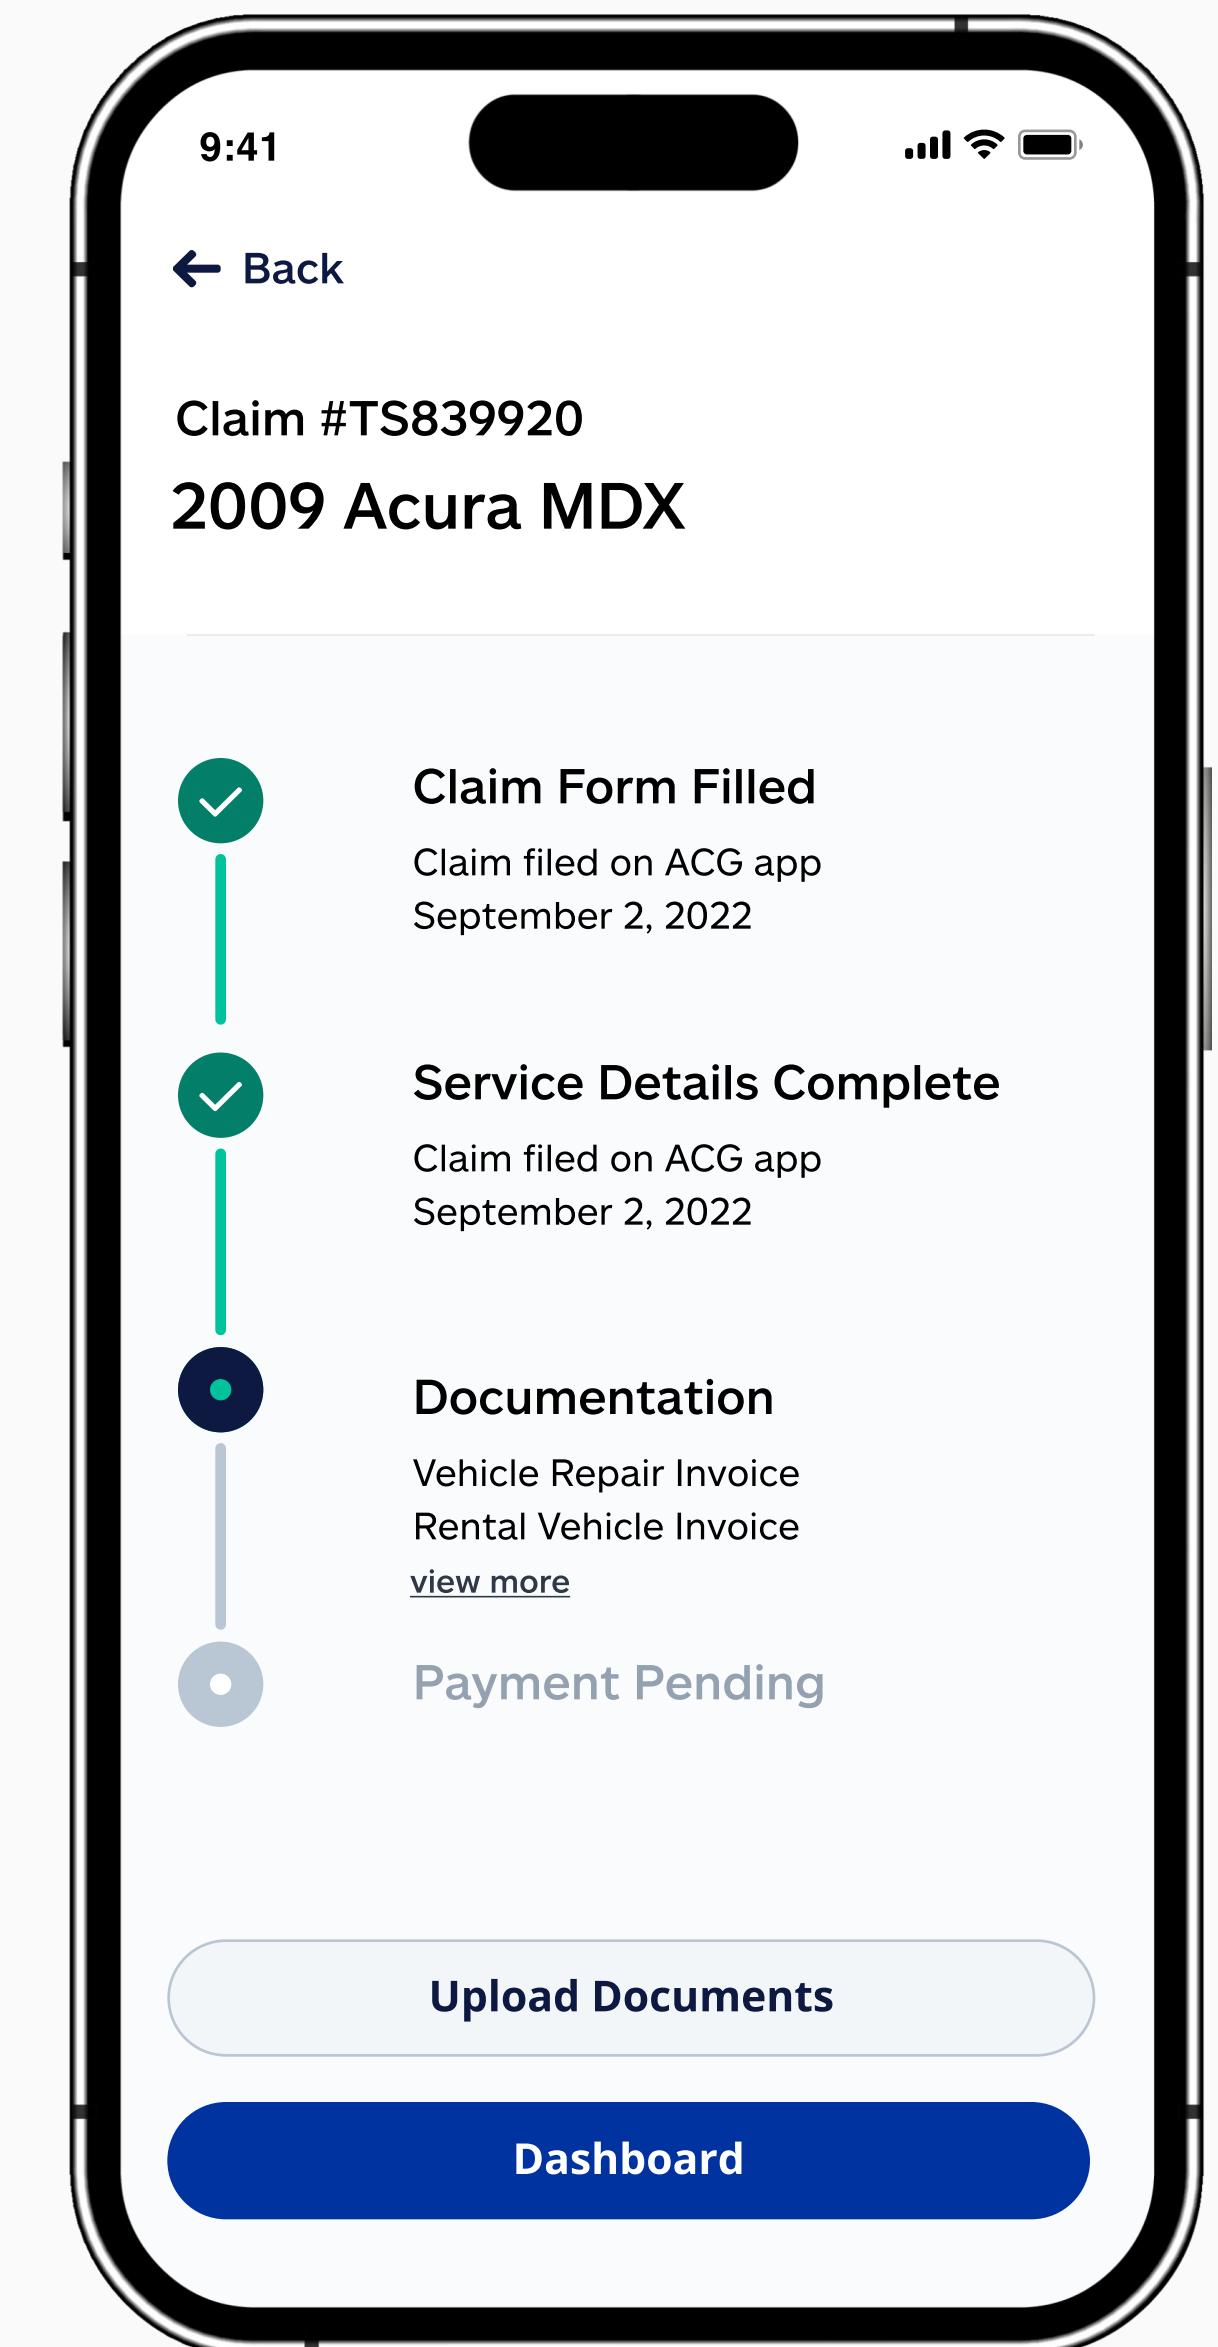

Details

Many of the components for this project were taken from the Allstate US design system, which had been newly redesigned and documented in Figma. However, certain new components were extrapolated from the design system and later added once the project was complete. This process made it easier for developers and future Allstate designers to work with our designs.

Business Impact

Allstate Canada took our vision of the mobile claims experience and used it as a base internally to develop their new digital experience.

HAPPENS, is a play on words of the term "sheet mask" and the popular "happens" that is often said when an inconvenience occurs. To go along with this, I named it after a funny crappy situation that most people at one point in time have experienced: accidentally shrinking your clothes in the dryer, getting dumped, your parents failing a test, losing something important, and so on.

03

Defining Success

Measuring success

Design objectives

Measuring Success

01

Traffic and Engagement

80 new users/day during in-person grad show
• 40% of event attendees

900 new users in 6 months
• 2x attendance of in-person show

5 minutes average engagement time
• Enough time to navigate to 2 profiles and/or case studies

02

Employer / Recruiter Conversions

50 recruiter connections on LinkedIn
• average 1.5 connections per graduate

33 recruiter messages or e-mails
• average 1 message or e-mail per graduate

03

User Feedback

Positive user feedback
• At least 90% satisfaction rate

Successful site navigation
• Users are able to utilize all functions of the website with minimal friction and in a timely manner

Design Objectives

Content-First Design

Ensure the website's user interface and branding does not overpower student projects

Discoverability

Consistently presenting opportunities for users to discover both graduates and their case studies.

Continuity

Create an experience where the user can seamlessly navigate between pages and sections.

Design Objectives

Must dos

Profiles, bio, and projects, and social links

'Filtering' system based on discipline & search by names

Consider content of case studies (project overviews VS. case studies – show whole project or link out?)

Events page (physical or digital location details)

Project tags should be ranked or limited to a certain number

Discoverability should be relevant to ones project vs one's interest in jobs
If someone only does only branding for e.g., put their work before projects that also have branding

Portraits need to be cohesive and compressed haha (maybe same overlay colour or B&W)?

Resume and work experience? (uploaded/ linked document)

Add changing spotlights to main page

Add thumbnail/ profile photo of designer underneath projects

Contact information/form in footer?

below projects - 'more from this user' or 'other projects like this' (e.g. more interaction projects)

Would-love-to dos

Categories related to sector or topic that the design project is about, e.g. healthcare, arts+culture, social justice

Related/similar projects or more from this designer

Pop-up survey (or just a quick 1 Q) that asks viewers what type of work they are most interested in, etc. → shows them grads who specialize in that discipline

Marketing promo videos with DESN students marketing the show/ venue

Personal bio videos?

Let each designer have their own personality somehow – through answers to fun questions, quotes, personal logos/ icons etc.

Allow people to bookmark designers and projects so they can go back and find them easily (e.g. cache, Jetboost?)

A webpage within a webpage viewer with website nav controls so that people can view others' portfolio sites but easily return to the grad site (e.g. iframe)? (or just open in new tab)

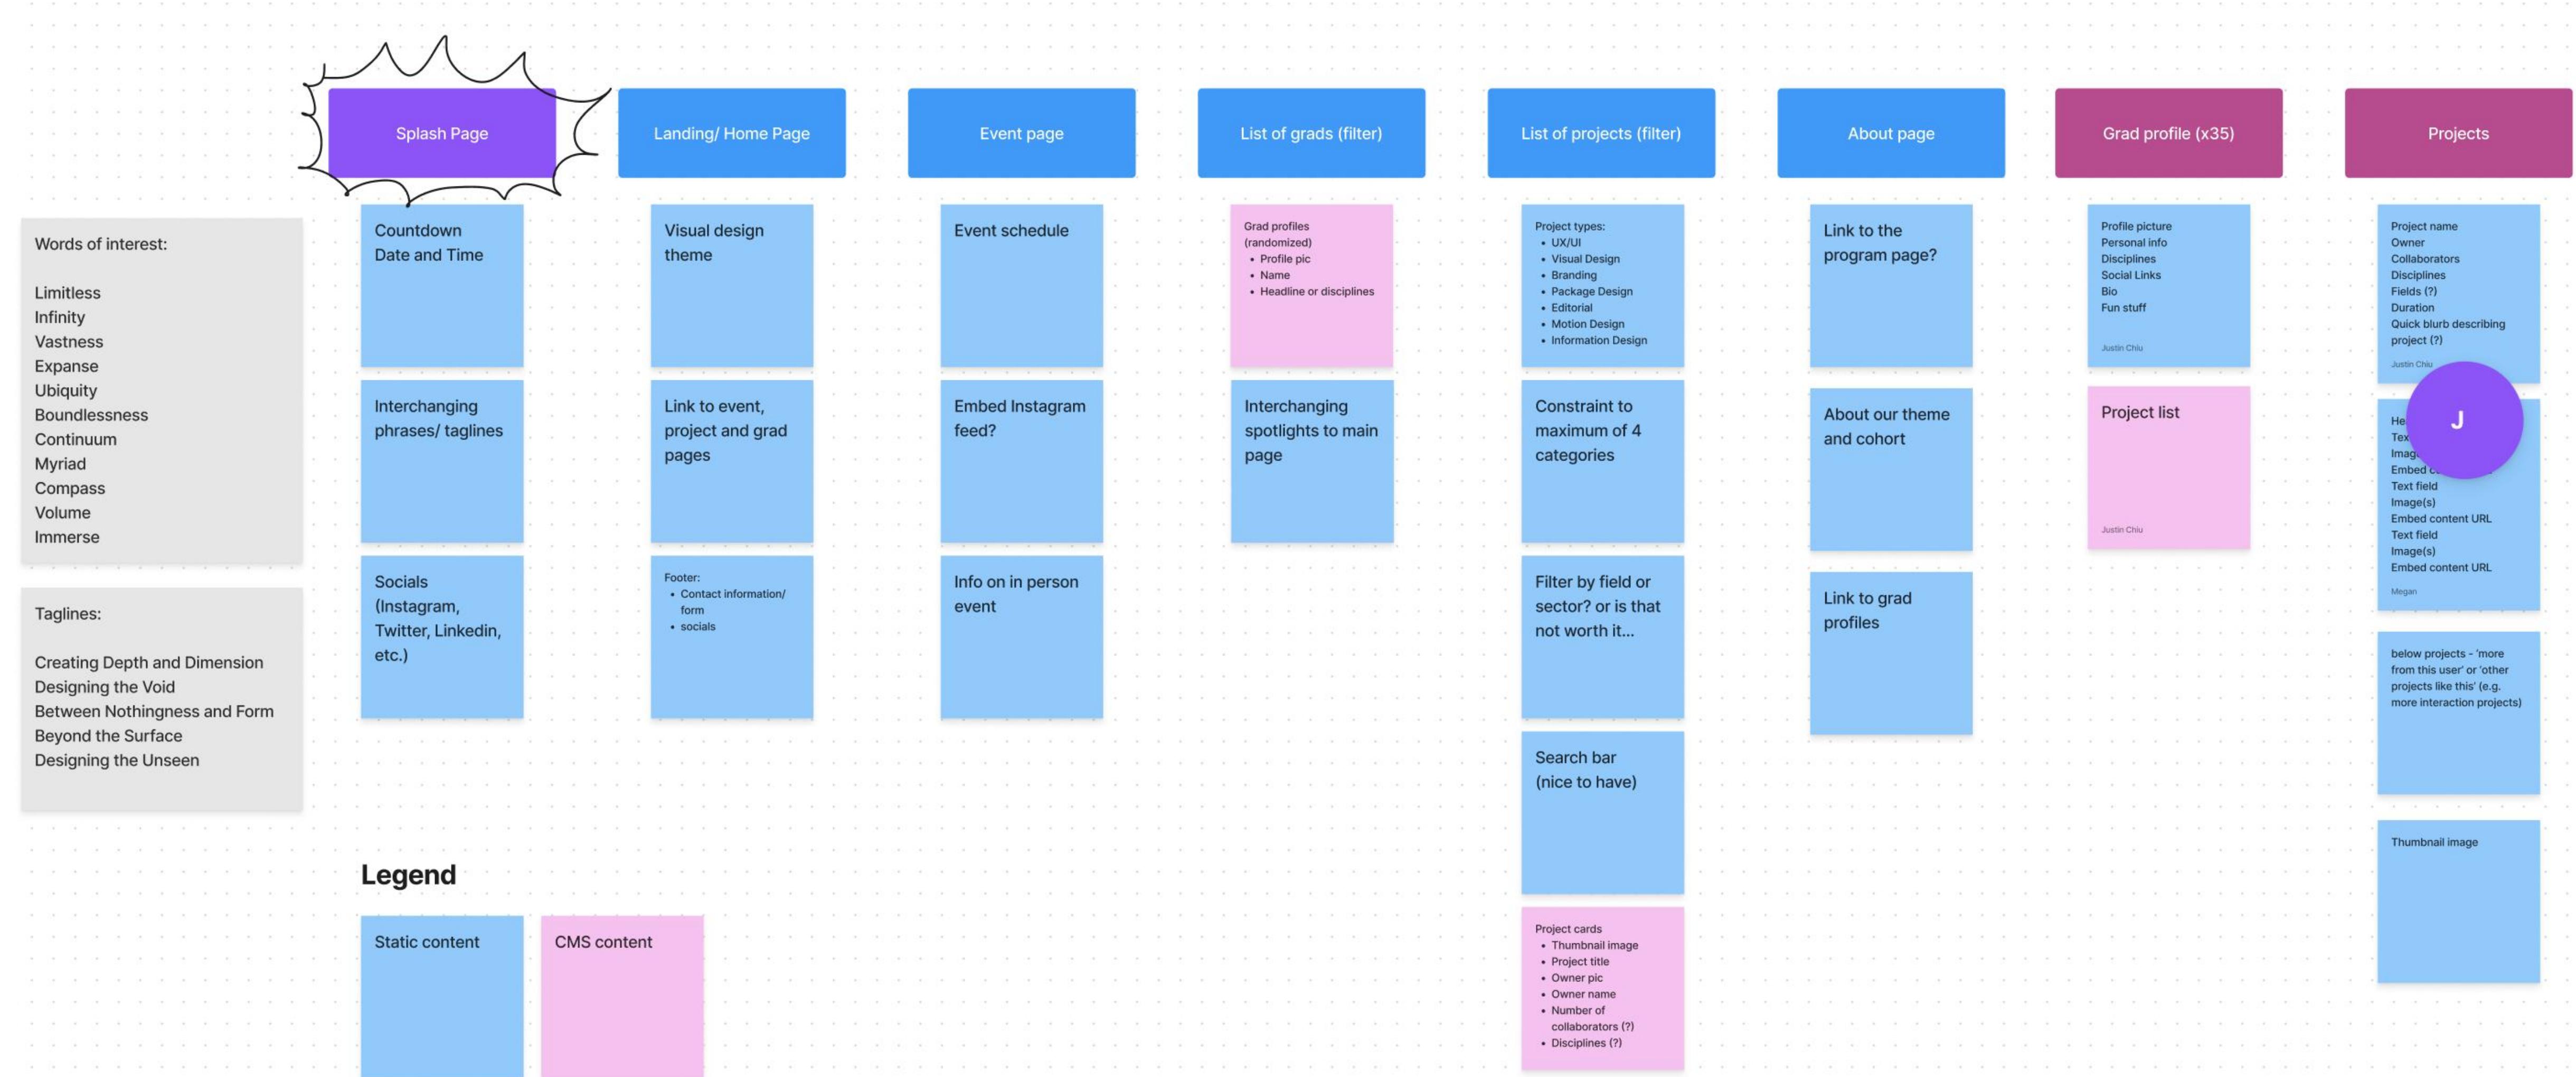

Barba.js – seamless transitions between pages, URL replacement

BUILDING CONFIDENCE

JOB RECRUITMENT

PROGRAM REPUTATION

Design Objectives

Preliminary Brand Assets

Logo overview

The logo is dynamic, using both the patterns from the penrose assets, along with the wordmark which stays consistent throughout each variation.

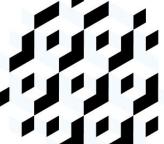

Logomark THE DESN SPACE Brand Style Guide 33

Graphic Motif: Variations

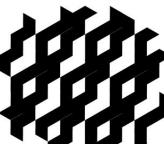

Garnish
Only used at large scale, or by itself as a decorating element.
Examples: inside covers, divider blocks on web, decorating elements for windows, tote bag etc.

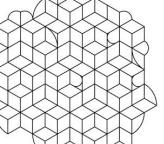

Tier 1
Used as an overlay on image for visual interest, or on its own.
Examples: social media posts, printed posters, splash page

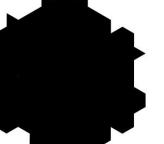

Tier 2
Used as an overlay on image for visual interest, or on its own.
Examples: social media posts, printed posters, splash page

Outline
Only used at large scale or on its own. Colour can be added behind or to create shapes depending on application.
Examples: wayfinding, 'thank you' cards, social media, motion graphics

Solid
Only used for social media images.

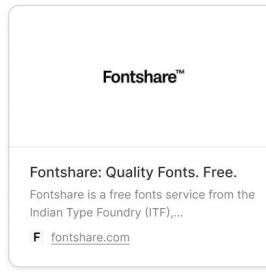

THE DESN SPACE Brand Style Guide 09

General Sans

HOW TO USE

- Use for all body copy
- May also use for slightly larger blocks of text like pull-quotes or short descriptive sub-lines
- Avoid using for display headlines

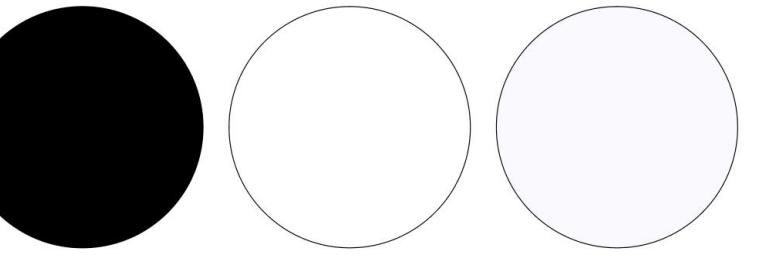

Fontshare™
Fontshare: Quality Fonts. Free.
Fontshare is a free fonts service from the Indian Type Foundry (ITF)...
[F fontshare.com](http://fontshare.com)

Typography THE DESN SPACE Brand Style Guide 23

Primary colours

These are the colours that will be used for the majority of all design work. Black as the accent colour on a white background. The "off-white" is used as the secondary colour on the penrose patterns.

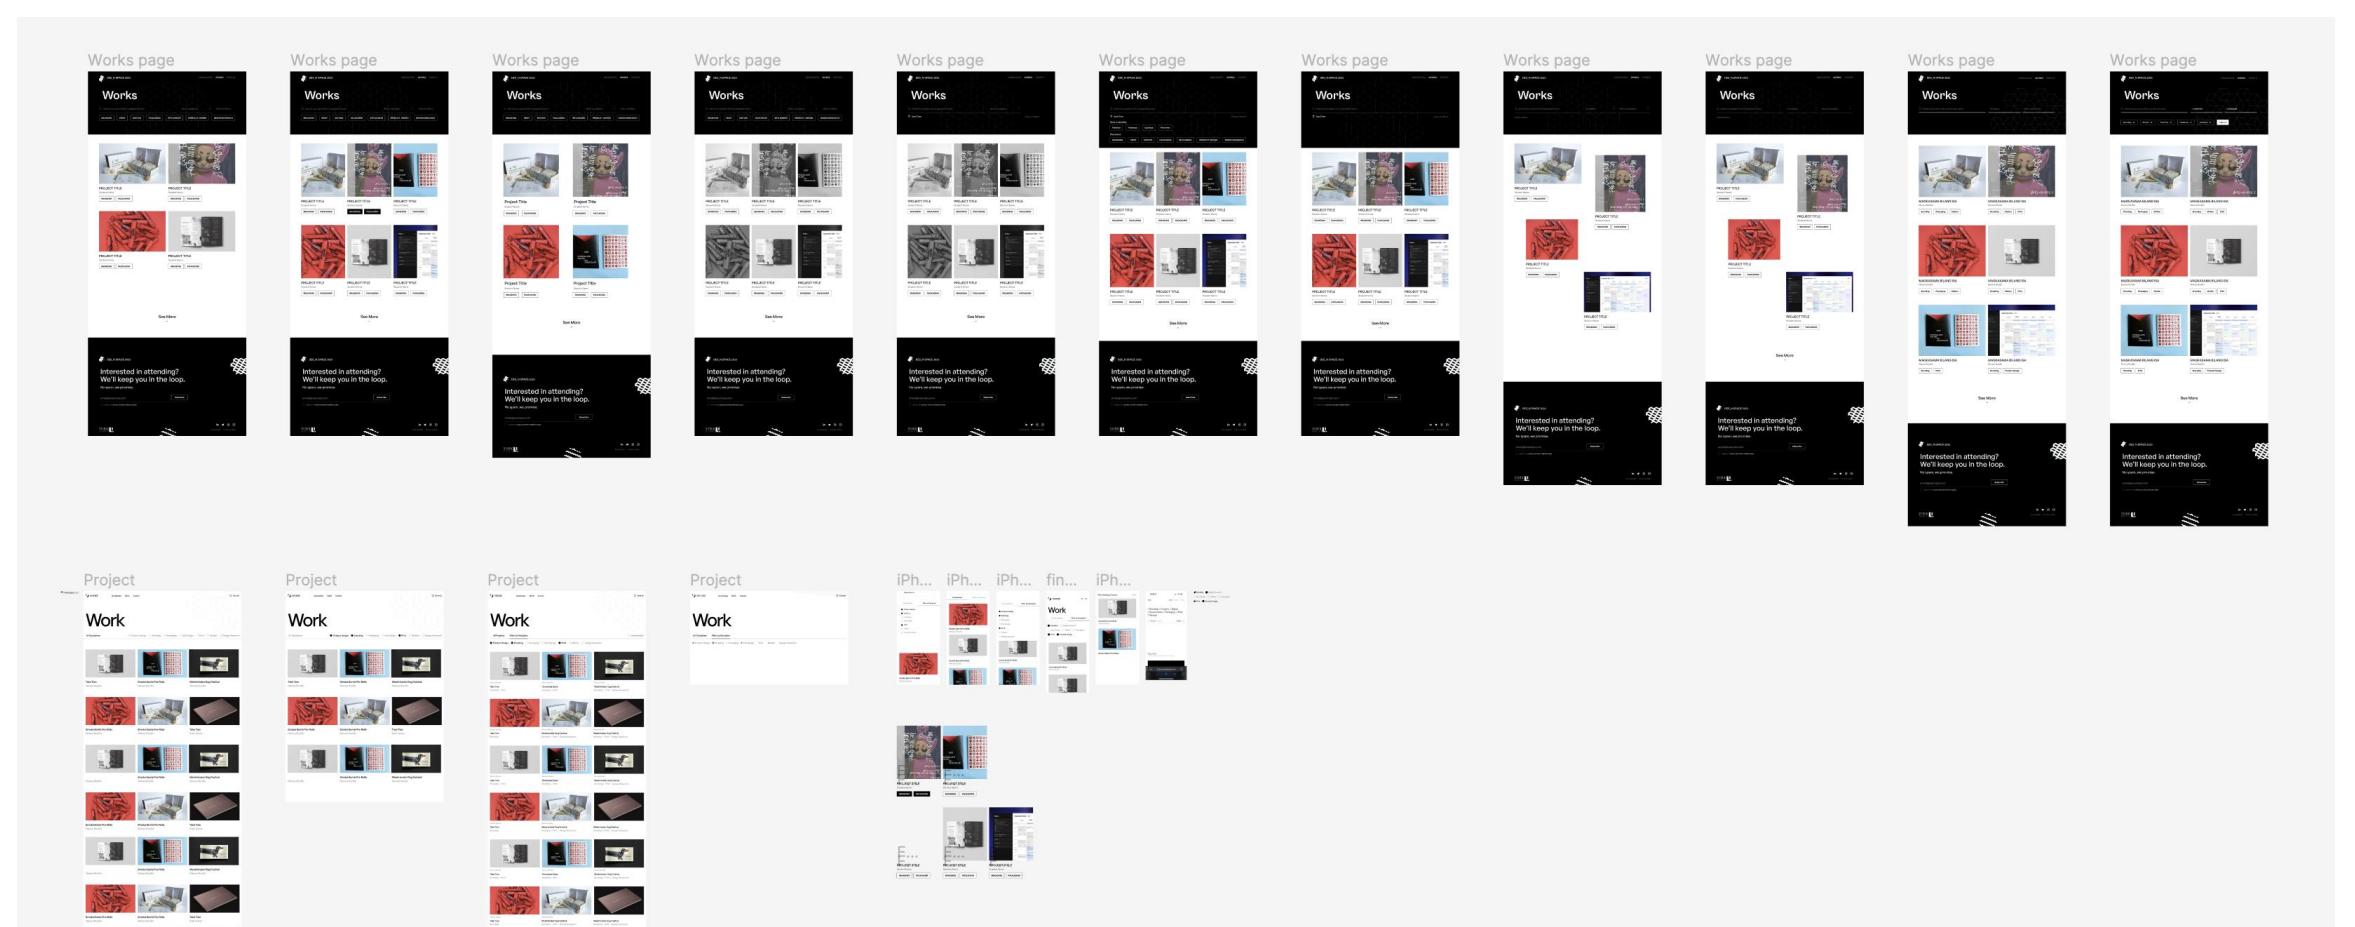

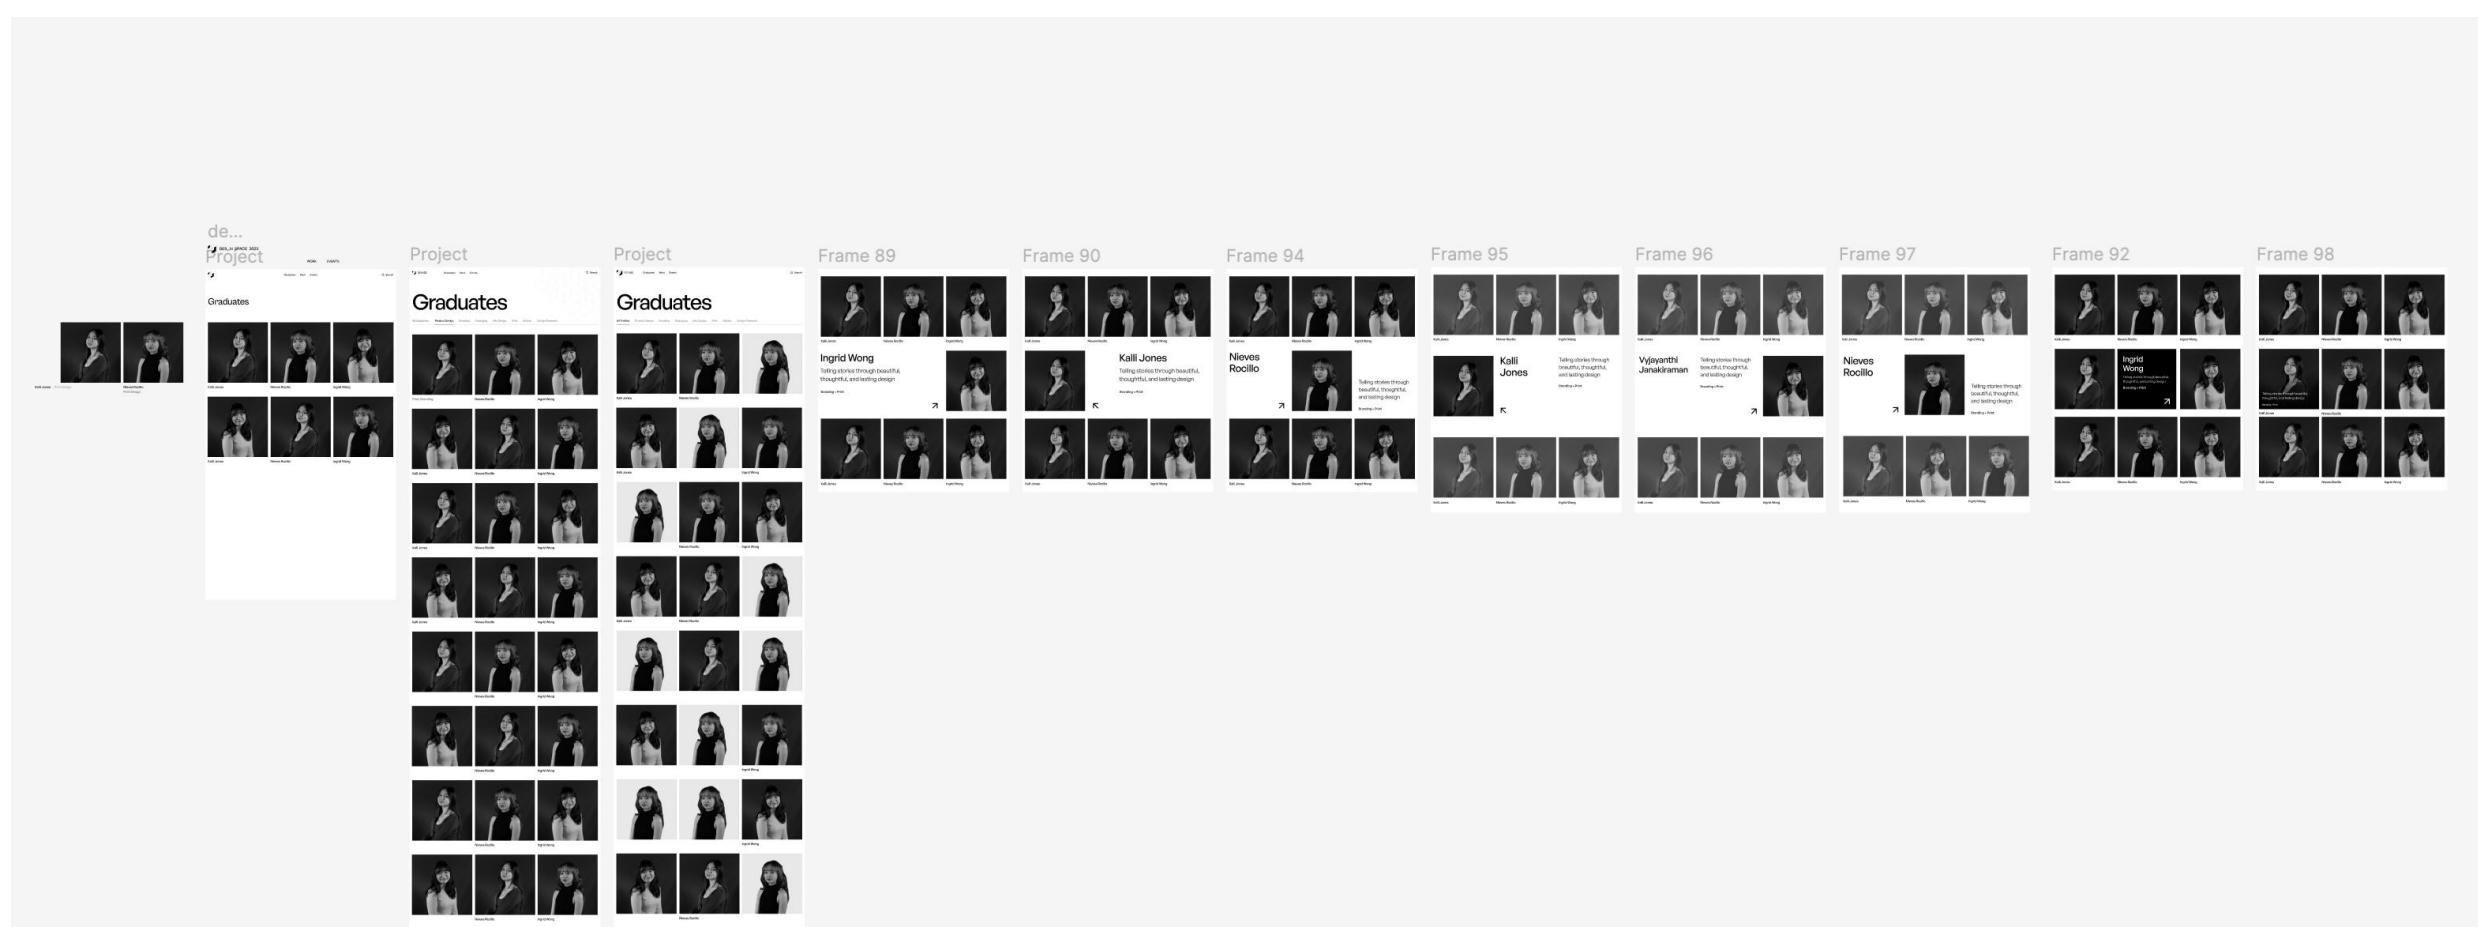

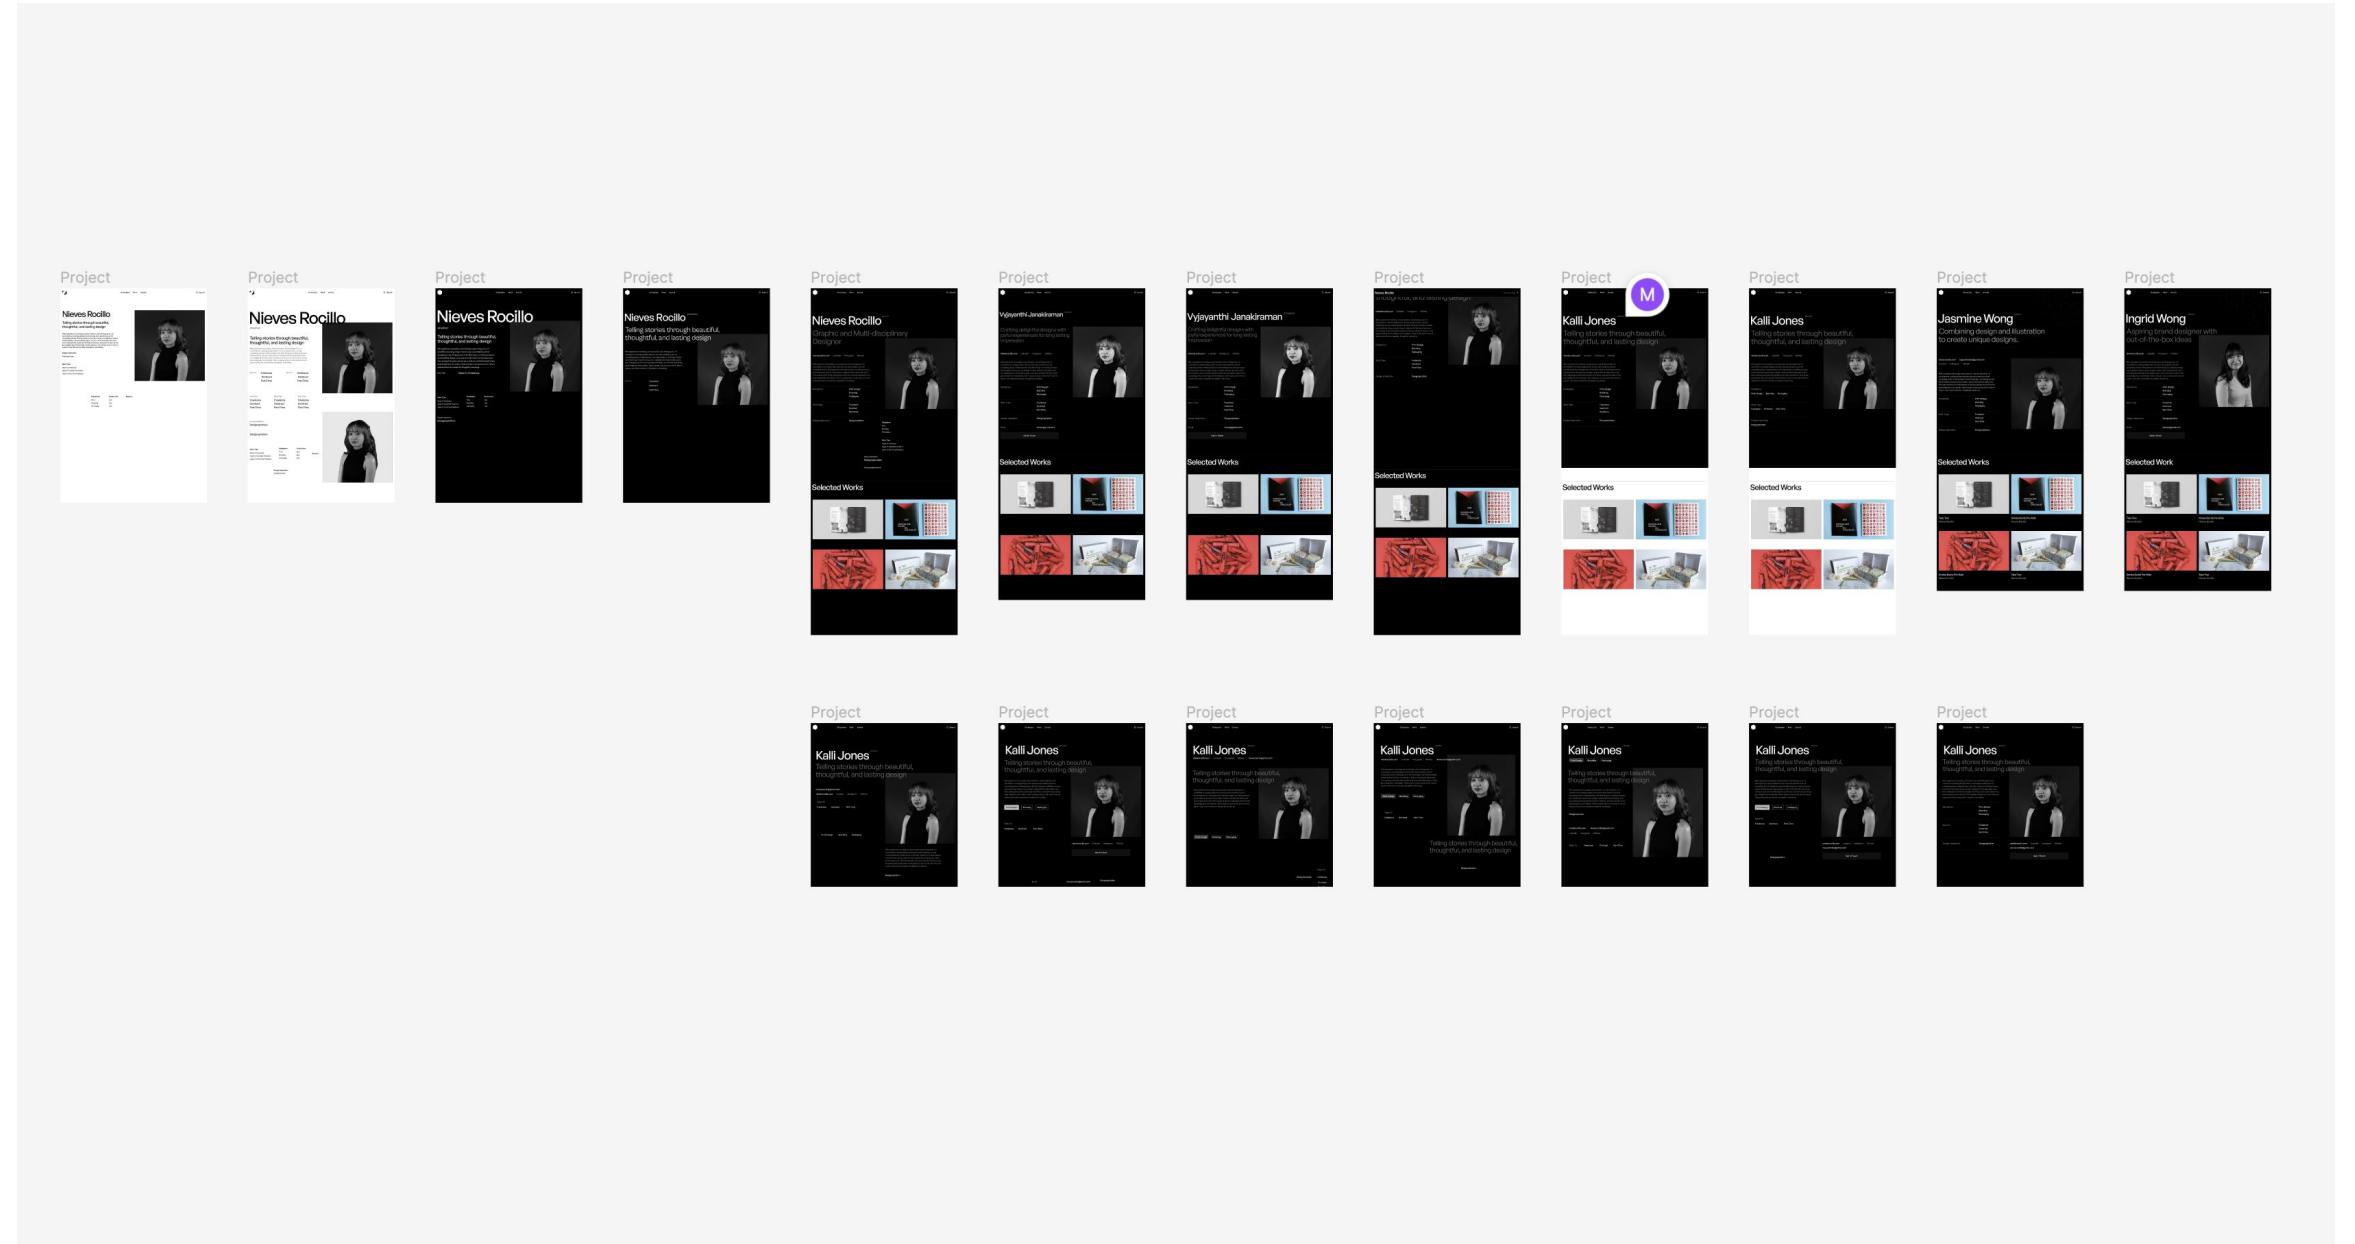

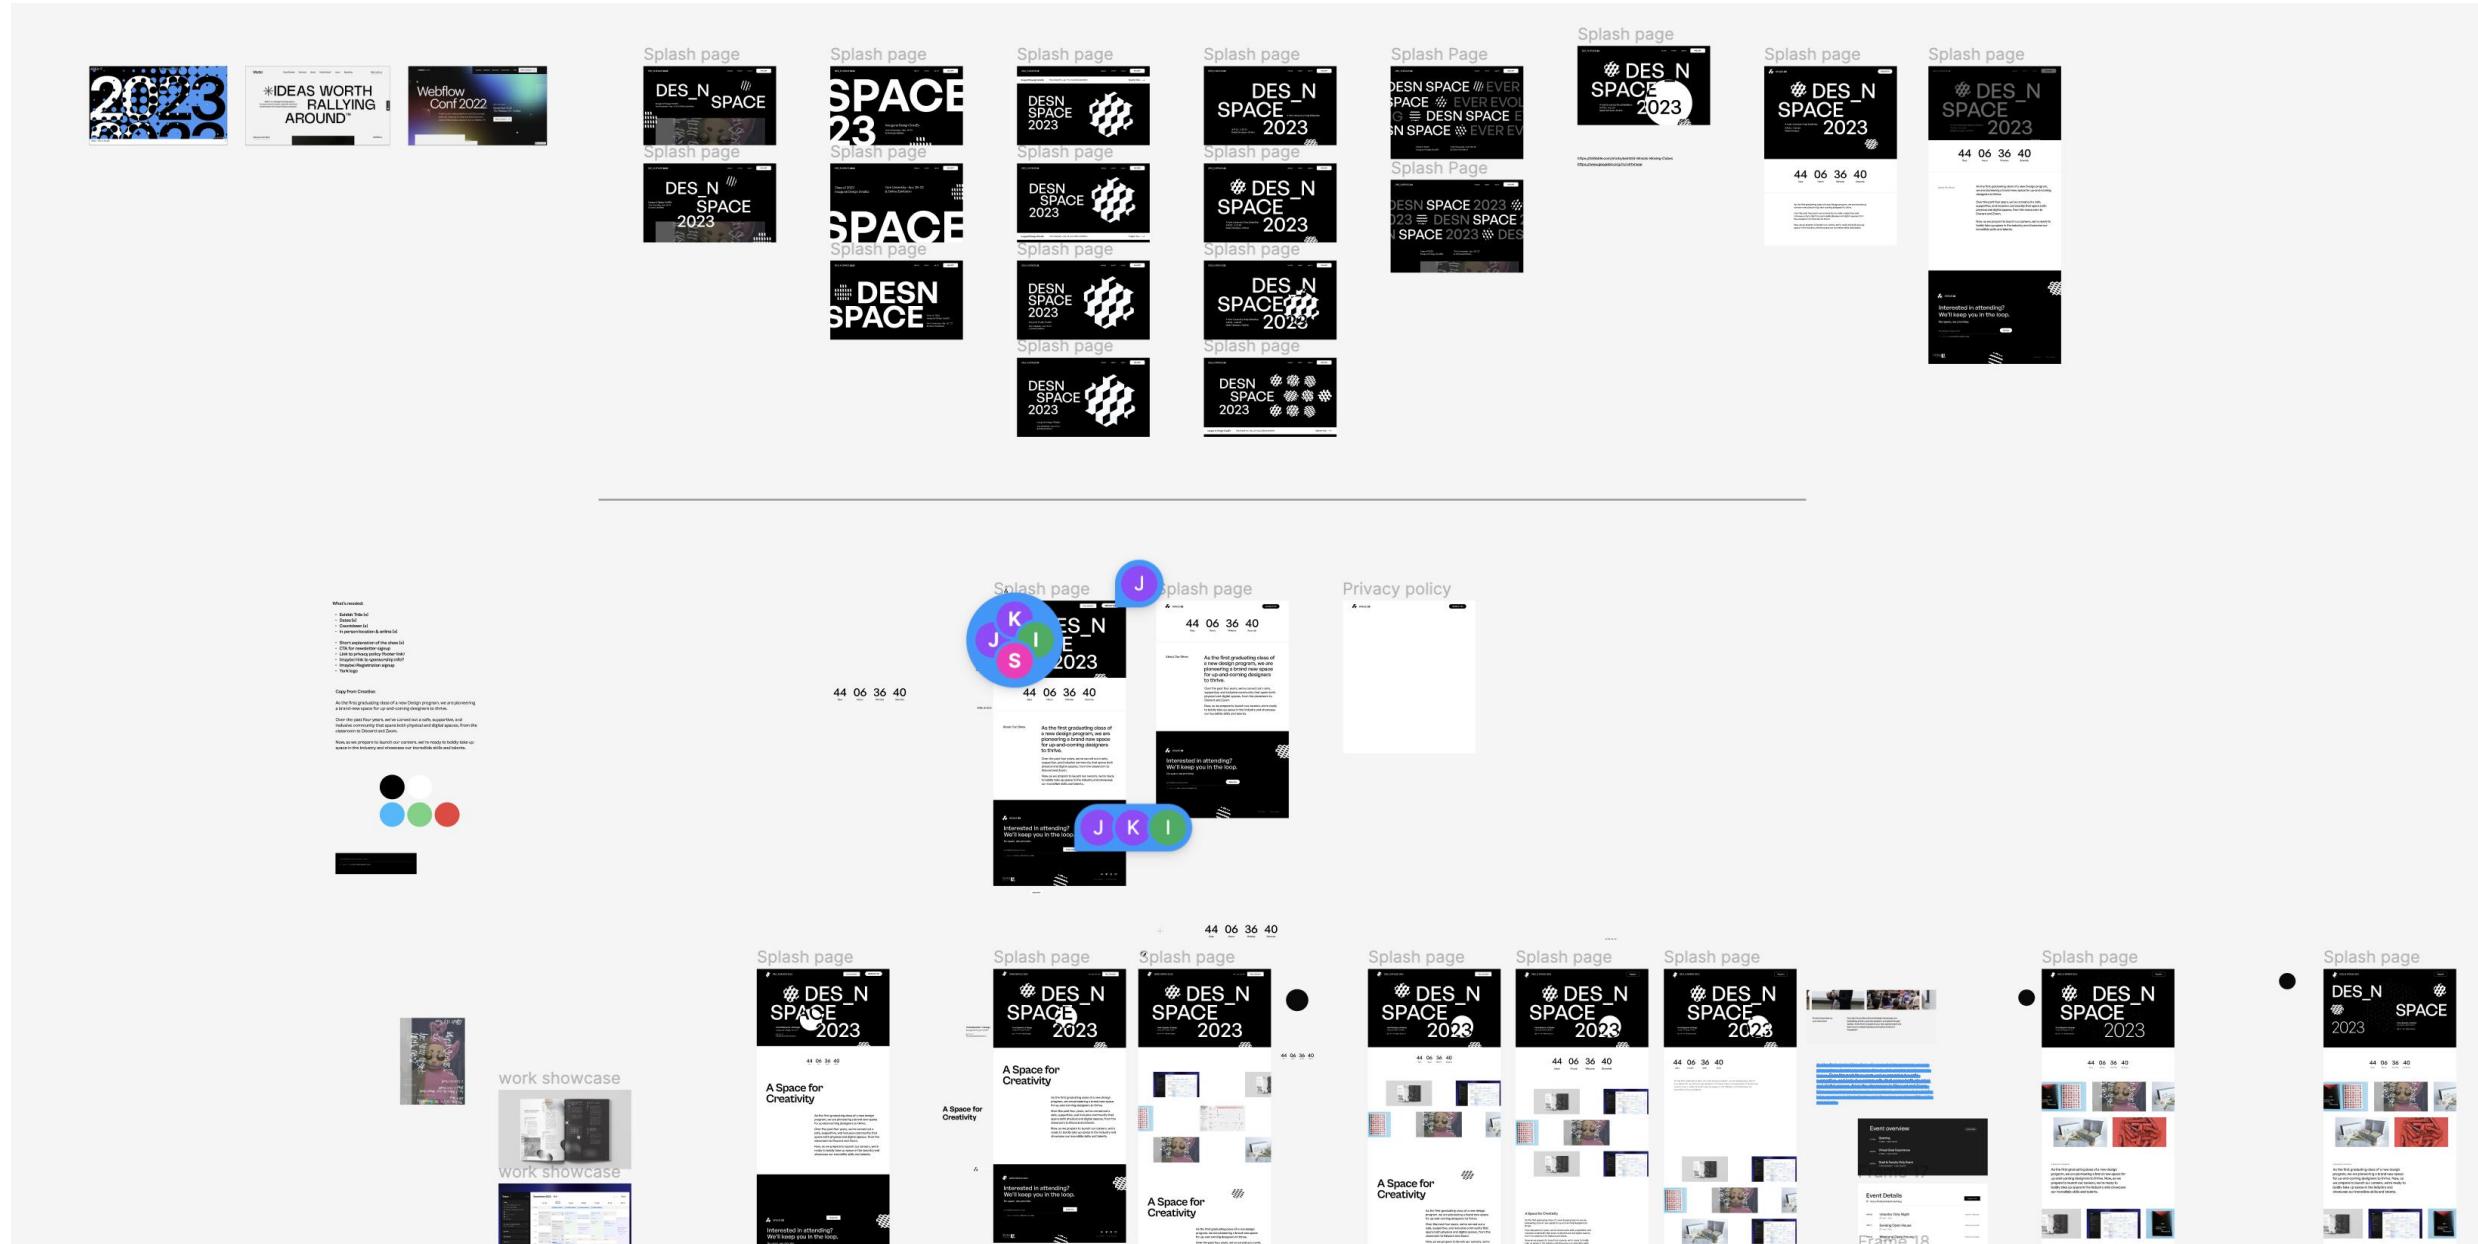

Black	White	Off-White
HEX: #000000 CMYK: 0, 0, 0, 100 RGB: 0, 0, 0	HEX: #FFFFFF CMYK: 0, 0, 0, 0 RGB: 255, 255, 255	HEX: #FAFAFE CMYK: 2, 1, 0, 0 RGB: 250, 250, 254

Colour THE DESN SPACE Brand Style Guide 05

We were provided with a set of brand guidelines that loosely outlined the implementation of the identity. Type and colour guidelines were provided, along with the primary identifying Penrose assets and logos, scaled to fit various contexts from physical signage to digital mobile devices.

Telling stories through beautiful, thoughtful, and lasting design

With experience in branding, communication, and all things print, I'm committed to creating designs that not only solve problems, but tell compelling stories. Finding beauty in the little things is my lifelong mission, and something I bring to every project. I believe that the best ideas come from looking at the world with wonder at all times, and that the heart of any good design lies in the details. There's always a story to tell, and I'm here to capture ones that are beautiful, thoughtful, and lasting.

Nieves Rocillo (she/her)

Telling stories through beautiful, thoughtful, and lasting design

With experience in branding, communication, and all things print, I'm committed to creating designs that not only solve problems, but tell compelling stories. Finding beauty in the little things is my lifelong mission, and something I bring to every project. I believe that the best ideas come from looking at the world with wonder at all times, and that the heart of any good design lies in the details. There's always a story to tell, and I'm here to capture ones that are beautiful, thoughtful, and lasting.

Integration

PowerImporter

Syncing from Airtable to Webflow

Data marked as 'approved' in Airtable was automatically synced with our primary CMS via a third-party automation workflow software called PowerImporter. This process occurred once every hour and allowed content to automatically populate the live website.

The screenshot shows the PowerImporter for Webflow interface. At the top, it displays 'PowerImporter for Webflow™' and 'Workflows'. Below this is a card for the 'DESN 2023 Exhibit' Degree Exhibit Sandbox. The card lists six sync mappings between Airtable and Webflow:

Airtable (view)	Webflow
Graduate Profiles (Synced with Webflow)	→ Graduate Profiles 33
Projects (Synced with Webflow)	→ Works 143
Disciplines (Grid view)	→ Disciplines 7
Work Type (Grid view)	→ Work types 4
Motion Assets (Synced with Webflow)	→ Showcase Assets 29
Featured Projects (Synced with Webflow)	→ Featured Projects 12

At the bottom of this card are four buttons: Sync, Test & Review, Edit, and Schedule. Below this is a section titled 'Last 6 Imports' showing the most recent sync activity:

- Last Import:** Started an hour ago, completed in 3 minutes. It shows 11 keeps, 217 updates, and 10 warnings. A 'View details' button is available.
- Failed Import:** Started at May 1, 2023 10:09pm, failed in less than a minute. An error message states: 'Error: Webflow API Error: InconsistentPublicationsError: Site is published to multiple domains at different times.' A small speech bubble icon is on the right.

Content Population

Webflow CMS

Primary CMS

Since the bulk of our website ran on Webflow, we utilized their CMS to populate content into each custom template for graduate profiles and case studies. However, we never altered or added any data within this phase as data could not be synced backwards to Airtable.

Development Process

Webflow

Custom CSS and JS

Subtitle

Webflow

The screenshot shows the DESN GradEx Website in the Webflow design editor. The page title is "Graduates". The header features a large "Coming soon" message with a geometric hexagonal pattern. Below the header is a main title "Graduates". A navigation bar below the title includes links for "All Disciplines", "Branding", "Design Research", "Info Design", "Motion", "Packaging", "Print", and "Product". The main content area displays three black and white portrait photos of graduates. At the bottom of the page, there is a footer with the text "Branding • Print • Packaging •" and "No Element Selected". The left sidebar of the editor shows the page structure, including sections for "Body", "Nav", "wrapper", "header", "container", "grad_filters", "filter_baseline", "filter_mobile", and "grads_wrapper". The right sidebar shows toolbars for "None Selected" and "Style selector".

Hosting Custom Code

The screenshot shows a code editor interface with the following details:

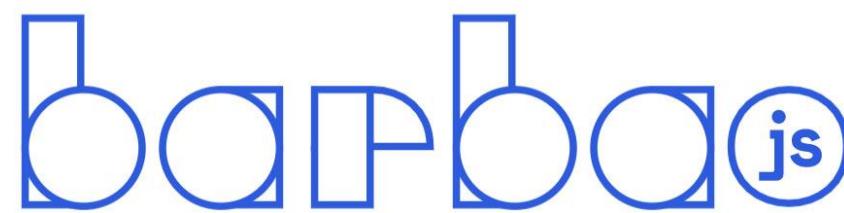

- EXPLORER** sidebar: Shows the project structure with files like `index.html`, `penrose.js`, `splash.js`, and `global.css`. The `global.js` file is currently selected.
- OPEN EDITORS** tab bar: Includes tabs for `global.js`, `index.html`, `penrose.js`, `splash.js`, and `global.css`.
- Code Editor Area:**
 - File path: `js > global.js > views > afterEnter > onresize`
 - Code content:

```
1232     global.navBg("white");
1233     // cmsSlider();
1234     window.onscroll = "";
1235     body.style.backgroundColor = "transparent";
1236 }
1237 ],
1238 ],
1239
1240     views: [
1241         {
1242             namespace: 'home',
1243             afterEnter() {
1244                 global.homeInit();
1245                 window.onresize = function() {
1246                     global.mobileMenuClose();
1247                     penrose.setSize();
1248                 }
1249             },
1250             {
1251                 namespace: 'graduates',
1252                 afterEnter() {
1253                     // cmsLoad();
1254                     window.onresize = function() {
1255                         global.mobileMenuClose();
1256                     }
1257                     grads.init();
1258                 },
1259             },
1260             {
1261                 namespace: 'work',
1262                 beforeLeave() {
```

Custom Features

Page Transitions

The screenshot shows a browser window displaying the GitHub repository for Barba.js. The main content area shows the 'Basic transition' page from the documentation. The page title is 'Basic transition' and it contains a heading 'What is it?' followed by a description of what a basic transition is. Below this, there is a code snippet from the repository's source code. The GitHub interface includes a sidebar with navigation links like 'GET STARTED' and 'ADVANCED', and a right sidebar with repository statistics and links.

Interactive Motion

The screenshot shows the YorkU Design website's homepage. The background features a complex, 3D Penrose tiling pattern composed of red and dark red shapes on a black grid. In the top left corner, there's a small message: "Thanks for joining us! Check back soon for our recap". The top right corner says "Coming soon". The header includes a logo for "DES_N 23", navigation links for "Graduates", "Work", "Events", and "About", and a search bar with a magnifying glass icon.

YorkU Design
Class of 2023

Inaugural Grad Exhibition

We're carving out a

A code editor window is overlaid on the page, showing JavaScript code for "penrose.js". The code defines a function "penrose.addSVG" that generates SVG code for a Penrose tiling. The code editor has tabs for "splash.js" and "# global.css". The code itself includes comments like "it animation" and "animation". The file path "penrose.js" is highlighted in blue in the sidebar.

```
312
313 penrose.addSVG = function () {
314     const svgCode = '<svg fill="none" height=1045 id=penrose-svg viewBox="0 0 1066

```

Challenges Faced

Technical

Code Experience

What we faced

- Development team of three members had limited experience with JavaScript, Git, and GitHub and no experience with back-end web development
- Low comfort level with asynchronous operations and code libraries

How we resolved it

- Developing most HTML and CSS in Webflow
- Enlisted a known developer from outside the design program to advise on back-end development issues
- Leveraged Stack Overflow, ChatGPT, and Bing Chat to learn development concepts and syntax and solve specific problems

Webflow Limitations

What we faced

- Limits on lines of custom code allowed
- Limits on number of CMS fields, nested CMS lists, CMS items loaded on live page
- Webflow Editor lag due to high volume of CMS items
- Webflow IX2 animation engine not compatible with Barba.js page transitions

How we resolved it

- Hosted all custom CSS and JavaScript on GitHub Pages and created dependencies
- Implemented third-party plugins such as Finsweet Attributes to expand CMS capabilities
- Developed custom JavaScript solutions to address a variety of Webflow limitations, coding animations with Green Sock (GSAP) library

Page Transitions (Barba.js)

What we faced

- Page transitions frequently aborted if the browser encountered errors or was too slow to load the next page
- Code would not destroy and reinitialize on transition
- Elements from both previous and next pages would coexist during transitions, causing `querySelector` commands to get the wrong elements

How we resolved it

- Turned on Barba debug mode and used browser debugger to find and address errors
- Develop custom JavaScript with all pages in mind, limiting the number of global variables to prevent conflicts
- Created a utility function to always select elements from the next page only

08

Collaboration

How teams collaborated

Cross-functional dependencies

Challenges or disagreements faced, and how they were resolved

How Teams Collaborated

1

Cross-functional all hands

Each week, teams would present their progress, next steps, and blockers to the remaining teams in order to stay updated and streamlined on progress.

2

Team lead meetings

Bi-weekly, team leads would gather to discuss any dependencies, blockers, or needs from their respective teams, as well as make executive decisions collectively.

3

Team meetings

Each week, teams would gather privately to discuss and collaborate towards progress in their respective teams and tasks. This progress would be presented at each week's all-hands to update remaining teams.

Cross-Functional Dependencies

	Required from Us	Required from Them

09

Reflections

Constraints

-
- 1** Tight timeline

 - 2** Limited resources

 - 3** Limited development knowledge

What I Learned

-
- 1 Leadership and management skills

 - 2 Time management and planning skills

 - 3 Designing for dynamic content

 - 4 Managing a back-end database

 - 5 Development frameworks and principles

In the works
(side projects)

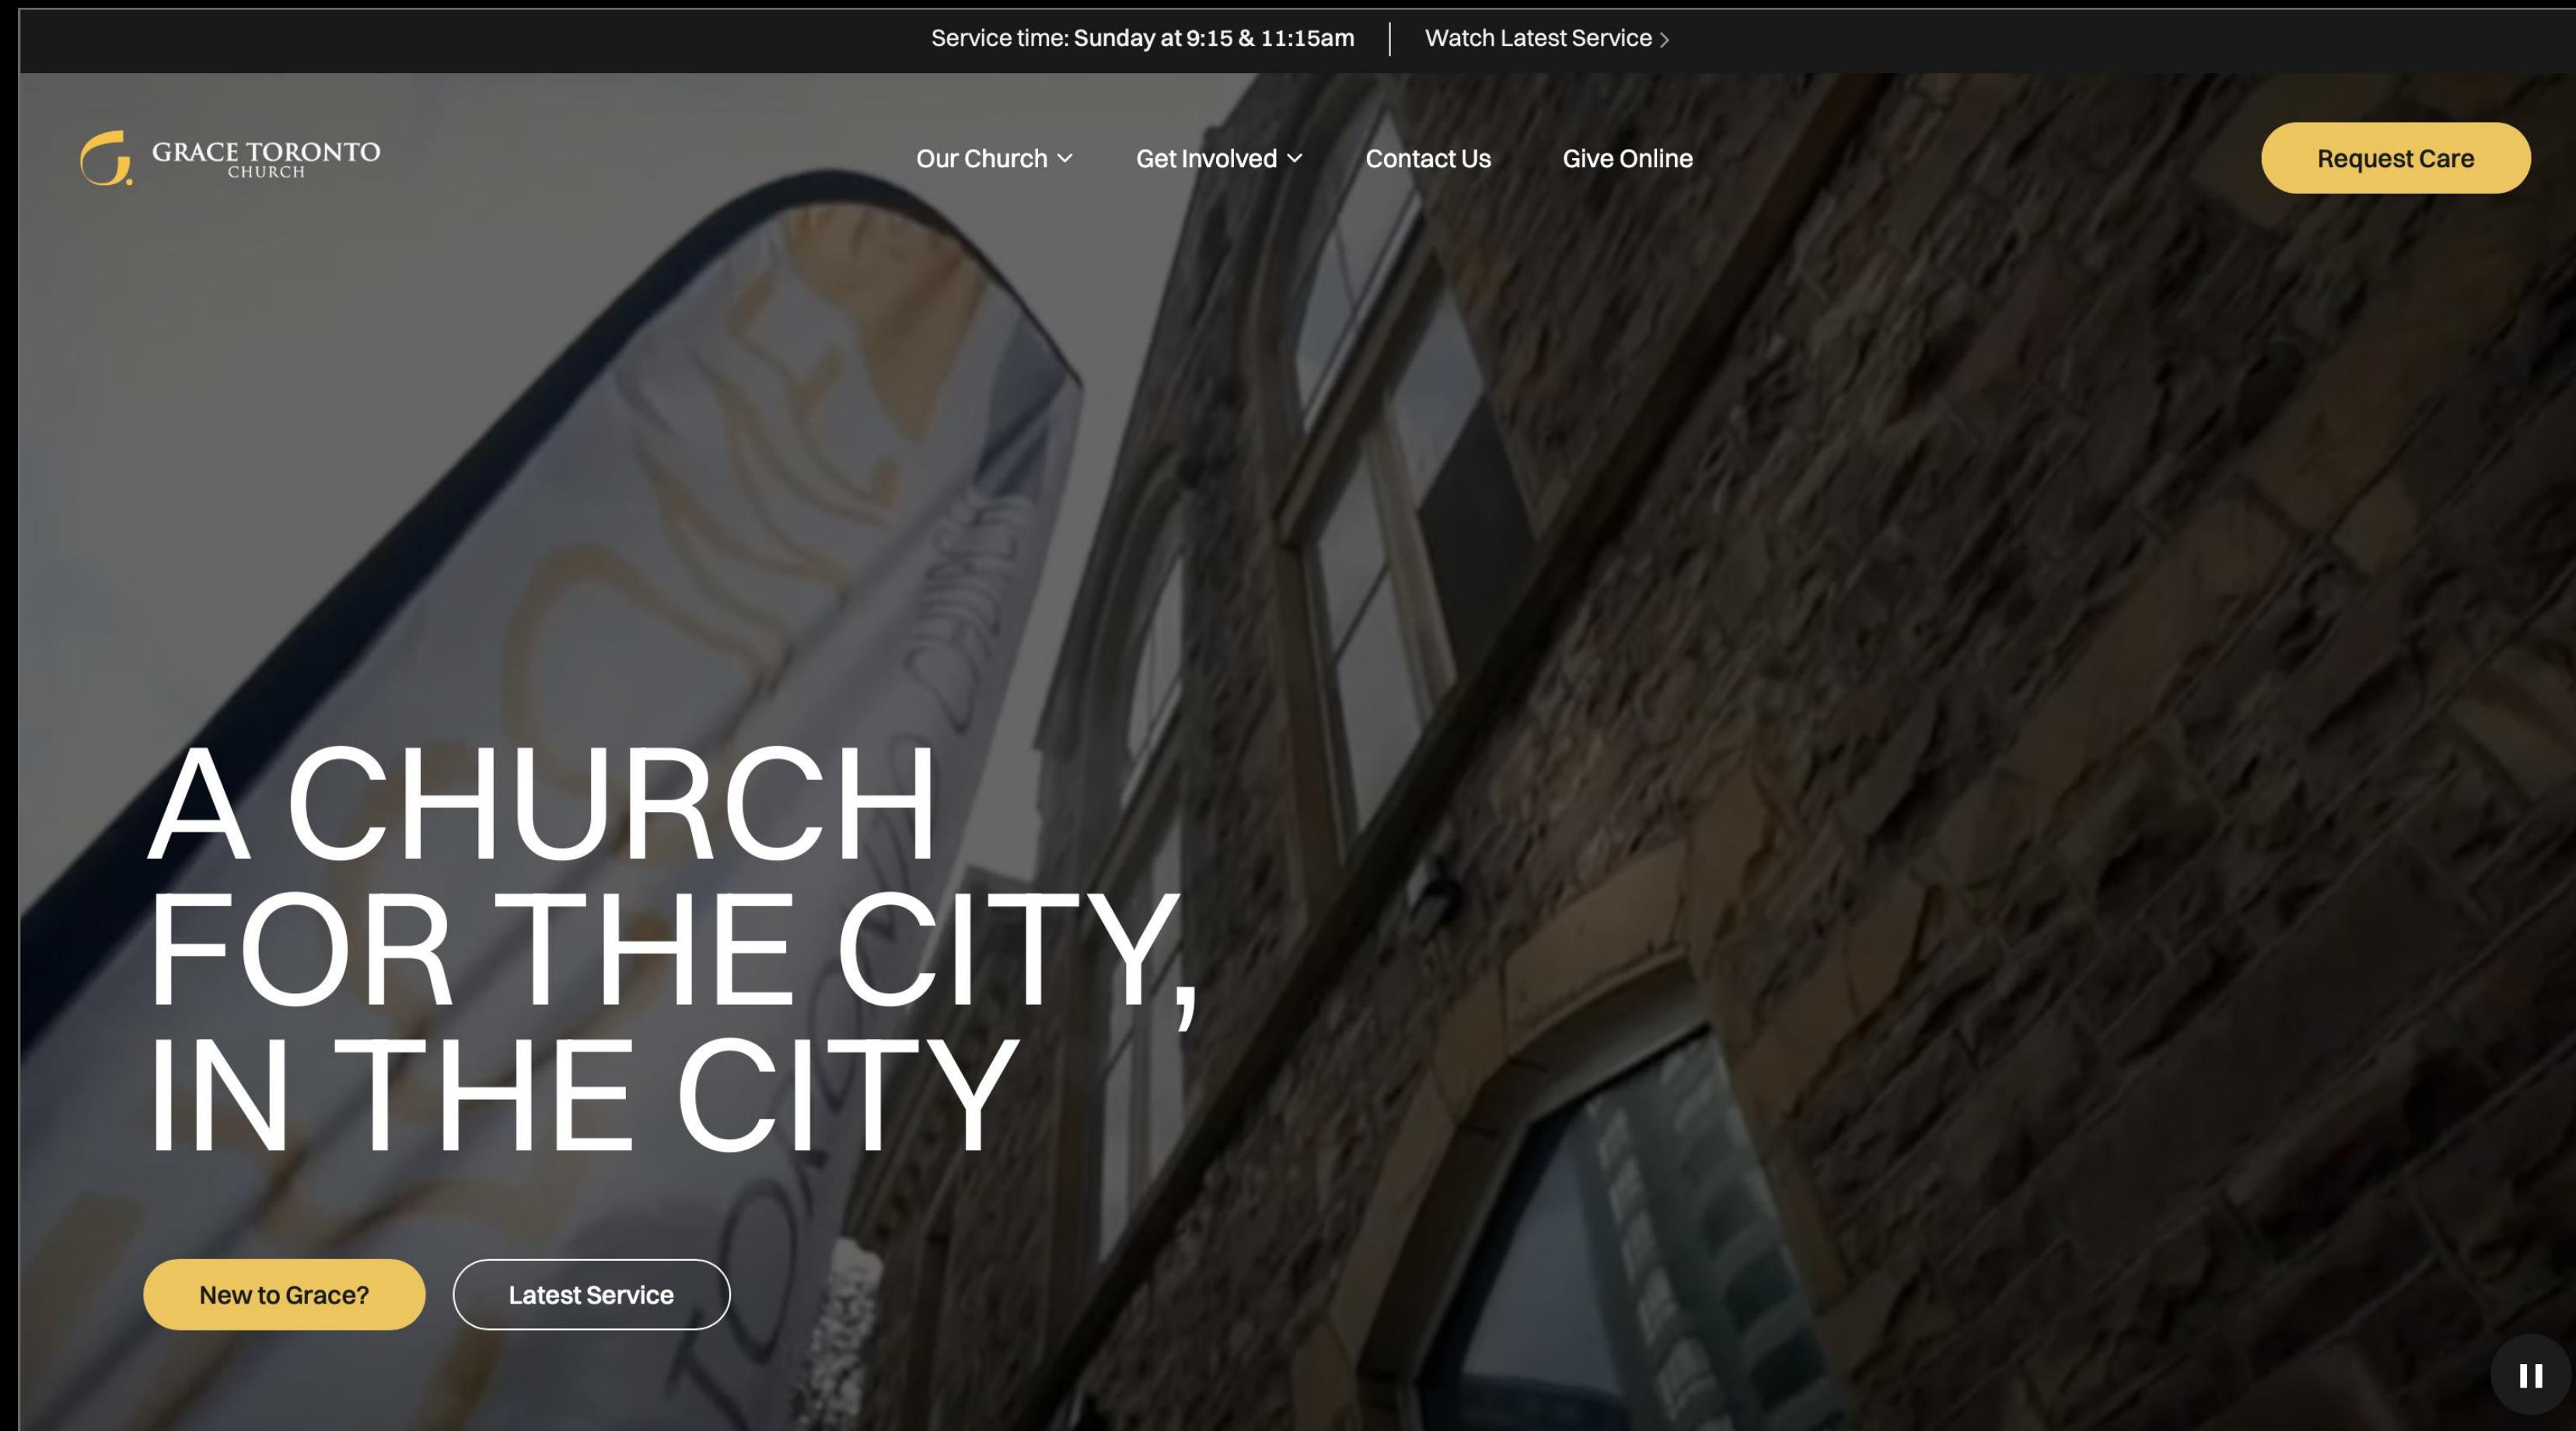

Wake App

Since January, a group of 3 developers and 1 designer (myself) have been working on a concept for an alarm clock that is controlled with motion sensing, making use of colourful brownian motion gradients to visualize the alarm. My role included ideation and competitive analysis as well as designing mockups and a UI component kit.

This project is currently ongoing, and I look forward to sharing this case study at some point later this year!

Neighbours Hall

Become a church member;
join our family of believers as
we walk through the Christian

This screenshot shows the "Membership Class" page. It features a photo of a group of people in a classroom setting. The page includes navigation links for various church programs and ministries. A call-to-action text encourages visitors to become members.

In February I was brought on to redesign the website for a church in downtown Toronto in consultation with their staff and congregants.

Through initial user research and many rounds of user feedback, I designed a site that is much easier to navigate, and that more accurately reflects the church. The UI feels modern yet retains some of the elegance found in the historical building's finishes.

I look forward to sharing the full case study this fall!

Final Pitch

What sets me apart

I have experience in the hotel/travel industry

I have used the Marriott app extensively over the years and have a passion for points programs, hotels, and travel brands. I also have direct experience working on the UI/UX team at a hotel company.

I have a traditional design background

I care deeply about visual details and creating interfaces that are clean and modern. I also have experience working with different brand identities inside of a cohesive whole.

I speak front-end dev (HTML, CSS, some JS)

I have experience coding or partially coding a number of websites, and I understand how Figma intersects with the design and development world.

Thanks!

I look forward to
hearing from you!
